

The **revtex4-1** document class of the American Physical Society *

Arthur Ogawa †

Version 4.1g, dated 2009/10/08:11:23

This file embodies the implementation of the APS REV_TE_X 4.1 document class for electronic submissions to journals.

The distribution point for this work is <http://publish.aps.org/revtex4/>, which contains fully unpacked, prebuilt runtime files and documentation.

Contents

1 Using REV_TE_X	5
1.1 Bill of Materials	5
1.1.1 Primary Source	5

Index	136

1 Using REV_T_EX

The file **README** has retrieval and installation information.

User documentation is presented separately in **auguide.tex**.

The file **template.aps** is a boilerplate file.

1.1 Bill of Materials

Following is a list of the files in this distribution arranged according to provenance.

1.1.1 Primary Source

One single file generates all.

```
%revtex4-1.dtx
%
```

1.1.2 Generated by tex revtex4-1.dtx

Typesetting ths file under T_EX itself runs the installer, which generates the package files.

```
%revtex4-1.cls, revtex4.ins, revtex4drv, aps4-1.rtx,
%aps10pt4-1.rtx, aps11pt4-1.rtx, aps12pt4-1.rtx, revsymp.sty
%
```

1.1.3 Generated by pdflatex revtex4-1.dtx

Typesetting the source file under L^AT_EX generates the documentation.

```
%revtex4.pdf,
%
```

1.1.4 Auxiliary

The following are auxiliary files generated in the course of running L^AT_EX:

```
%revtex4.aux revtex4.idx revtex4.ind revtex4.log revtex4.toc  
%
```

2 Code common to all modules

The following may look a bit klootchy, but we want to require only one place in this file where the version number is stated, and we also want to ensure that the version number is embedded into every generated file.

Now we declare that these files can only be used with L^AT_EX 2_E. An appropriate message is displayed if a different T_EX format is used.

```
1 %<*doc|kernel|aps|rmp|revsymb>  
2 \NeedsTeXFormat{LaTeX2e}[1996/12/01]%
```

3 %</doc|kernel|aps|rmp|revsymb>

```
4 %<kernel>\ProvidesClass{revtex4-1}  
5 %<aps>\ProvidesFile{aps4-1}  
6 %<rmp>\ProvidesFile{apsrmp4-1}  
7 %<10pt>\ProvidesFile{aps10pt4-1}  
8 %<11pt>\ProvidesFile{aps11pt4-1}  
9 %<12pt>\ProvidesFile{aps12pt4-1}  
10 %<revsymb>\ProvidesPackage{revsymb4-1}  
11 %<*doc>  
12 \ProvidesFile{revtex4-1.dtx}  
13 %</doc>  
14 %<!*package&!options>  
15 [2009/10/08:11:23 4.1g (http://publish.aps.org/revtex4/ for documentation)]%FileInfo  
16 %<!/package&!options>  
17 %<kernel>\let\class@name\@gtempa
```

3 The driver module driver

This module, consisting of the present section, typesets the programmer's documentation, generating the `00readme.txt` and sample document as needed.

Because the only uncommented-out lines of code at the beginning of this file constitute the `driver` module itself, we can simply typeset the `.dtx` file directly, and there is thus rarely any need to generate the “driver” DOCSTRIP module. Module delimiters are nonetheless required so that this code does not find its way into the other modules.

The `\end{document}` command concludes the typesetting run.

```
18 %<*doc>
```

The driver uses packages `ltxdoc.sty`, `ltxdocext.sty`, `hyperref.sty`, and whatever font package has been selected.

```
19 \documentclass{ltxdoc}
```

```

20 \RequirePackage{ltxdocext}%
21 \let\url\undefined
22 \RequirePackage[colorlinks=true,linkcolor=blue]{hyperref}%
23 \expandafter\ifx\csname package@font\endcsname\@undefined\else
24   \expandafter\RequirePackage\expandafter{\csname package@font\endcsname}%
25 \fi
We ask for the usual indices and glossaries.
26 \CodelineIndex\EnableCrossrefs % makeindex -s gind.ist revtex4
27 \RecordChanges % makeindex -s gglo.ist -o revtex4.gls revtex4.glo

```

3.0.5 Docstrip and info directives

We use so many DOCSTRIP modules that we set the `StandardModuleDepth` counter to 1.

```
28 \setcounter{StandardModuleDepth}{1}
```

The following command retrieves the date and version information from this file.

```
29 \expandafter\GetFileInfo\expandafter{\jobname.dtx}\%
```

3.1 The Frontmatter File

As promised above, here is the contents of the frontmatter file.

```

146 \changes{4.1b}{2008/08/04}{As with author formatting, rag the right more, and assign \cs{@total}
147 \changes{4.1b}{2008/08/04}{Rag the right even more: .8\cs{hsize}. Also, assign \cs{@totallleftma}
148 \changes{4.1b}{2008/08/04}{The \texttt{rmp} journal substyle selects \texttt{groupedaddress} by}
149 \changes{4.1b}{2008/08/04}{Use \cs{setup@hook} to initialize all.}
150 \changes{4.1c}{2008/08/15}{Document class option longbibliography via \cs{substyle@post}}
151 \changes{4.1d}{2009/03/27}{Definition of \cs{@fnsymbol} follows fixltx2e.sty}
152 \changes{4.1e}{2008/06/29}{(AO, 455) be nice to a list within the abstract}
153 \changes{4.1f}{2009/07/07}{(AO, 513) Add class option linenumbers: number the lines a la \filen}
154 \changes{4.1f}{2009/07/07}{(AO, 516) Merged references are separated with a semicolon}
155 \changes{4.1f}{2009/07/10}{(AO, 520) Automatically produce \cs{bibliography} command when needed}
156 \changes{4.1f}{2009/07/11}{(AO, 521) Lonely bibliography head}%

```

```

157 \changes{4.1f}{2009/07/11}{(AO, 522) Warn if software is expired}%
158 \changes{4.1f}{2009/07/15}{(AO, 523) Add class option nomerge, to turn off new natbib 8.3 syntax}
159 \changes{4.1f}{2009/07/20}{(AO, 524) Makes no sense if citations are superscript numbers and so}
160 \changes{4.1f}{2009/10/05}{(AO, 530) \cs{@fnssymbol}: Failed to import fixltx2e.sty technology.}
161 \changes{4.1g}{2009/10/07}{(AO, 525) Remove phantom paragraph above display math that is given}
162 \changes{4.1g}{2009/10/07}{(AO, 538) \cs{MakeTextUppercase} inappropriately expands the double}
163 \changes{4.1h}{2009/10/09}{(AO) Remove expiry code in the release software}%
164
165 \end{filecontents*}

```

3.2 The Document Body

Here is the document body, containing only a `\DocInput` directive—referring to this very file. This very cute self-reference is a common `ltxdoc` idiom.

```

166 \begin{document}%
167 \expandafter\DocInput\expandafter{\jobname.dtx}%
168 \PrintChanges
169 \end{document}

```

And that is the end of the driver for the programmer’s documentation.

```
170 %</doc>
```

4 Overview

`REVTeX` is a `LATEX 2 ε` document class, somewhat like a hybrid of the standard `LATEX` `book` and `article` classes.

Certain packages are (should be) loaded by this class in any case: `amssymb`, `amsmath`, `bm`, `natbib`.

Certain packages are automatically loaded by this class when a corresponding class option has been invoked:

<code>REVTeX</code> option	package
<code>amsfonts</code>	<code>amsfonts</code>
<code>amssymb</code>	<code>amssymb</code>
<code>aps</code>	<code>overcite</code>

Certain other packages are to be loaded by the document through explicit use of `\usepackage`. Some mentioned in the user documentation are `graphicx`, `longtable`, `hyperref`, and `bm`.

Certain commonly used packages are known to be incompatible with `REVTeX`, among them `multicol` and `cite`. If such a package is found to be loaded, `REVTeX` issues an error message and halts the job. Halting might be considered severe punishment for loading an incompatible package, but if we were to proceed, an even weirder error might be encountered further down the road.

This document class implements the substyle: a set of mutually exclusive class options that, in this case, allow the document class to address multiple societies. It also implements a sub-substyle, giving the journal of the given society. Any society may create a substyle; this file generates one for `aps`.

FIXME: should always load the `graphicx` package. No, allow user to load whichever graphics package is desired.

QUERY: since `amsfonts` and `amssymb` extend syntax, why not load them in any case?

Certain processing occurs at the endgame for reading in REVTEX, thereby establishing precedence for assignments to LATEX's (and REVTEX's) parameters:

1. Figure out which society is operative and read in the indicated `.rtx` file.
2. Figure out which journal option is operative and execute the indicated journal command. This may lead to reading in a journal substyle `.rtx` file.
3. Figure out which pointsize is operative and execute the indicated pointsize command. This may lead to reading in a pointsize `.rtx` file.
4. Execute all of the document's options, in the order declared within the document.
5. Read in all required packages (like `natbib`, `amsfonts`, `amssymb`), that were determined by class, society, and journal.
6. The last required package, if existing, is the document's style file, the `.rty` file. Note that the `.rty` file can override the assignments of REVTEX, society, journal, and required packages, and even load its own packages. It can also, via appendations to `\setup@hook`, override the setup code itself.
7. Execute all of the setup code accumulated. Such code can be queued by REVTEX itself, by the society, by the journal, or by the pointsize.
8. At this point, REVTEX has completed the process of inputting itself, and LATEX will now execute the `\AtEndOfClass` procedures.

REVTEX will have enqueued code to execute at `\AtBeginDocument` time, in two different queues. `\document@inithook` executes immediately upon encountering the `\begindocument` statement, `\class@documenthook` at the end of all the code enqueued via `\AtBeginDocument`.

1. Install procedures to execute at the very end of the class's `\AtBeginDocument` processing, such as
 - (a) closing out the page grid
 - (b) putting out the `LastPage` label.
 - (c) issuing a `\bibliographystyle` command, based on the value set by the society substyle.
 - (d) setting default values for parameters used in the document. FIXME: differentiate between class's parameters that can wait until they are used in the document, and parameters that are used at `\AtBeginDocument` time.

2. Install procedures to execute the very last at `\AtEndDocument` time, such as the `\clearpage` processing.

Certain events are optionally scheduled for `\AtBeginDocument` time:

1. Setting default values for the Booleans and for other procedures used in formatting.
2. In response to class options options, adjusting parameters and procedures used in formatting.
3. Implementing the `eqsecnum` option, if required.
4. Setting the state engine for data commands.
5. Memorizing procedures for later use.
6. Setting type size and area, for use by later calculations.

Certain events are scheduled for `\class@enddocumenthook` time:

1. Print out the migrated floats or the end notes, if needed.
2. Close out the page grid.
3. Label the last page of the document
4. (`natbib`) prepare to read in the `.aux` file.

5 Writing journal-specific extensions to REVTEX

With this version of REVTEX, we introduce a somewhat different scheme for adapting REVTEX to the needs of a specific journal.

To create a journal substyle, you create new class options in REVTEX for the society, say `osa`, and any of that society's journals, one of which is, say, `josaa`, using the code for the APS as a guide. In particular, each of your new options should separately define `\@society` and `\@journal`. That for the former will be the same for all options relating to a particular society.

Then, for the society, you create a corresponding `.rtx` file, in our case `osa.rtx`. Within that file, you override procedures and parameter assignments as you see fit. Ideally they will be generally applicable to all of that society's journals (see the file `aps.rtx` for a realization of this scheme). Also within that file, you include a section of code for each journal, that for `josaa` looks like:

```
% \c@ifx{\@journal\journal@josaa}{%
% <code specific to the josaa>
% }{%
%
```

Thus far, the scheme is similar to that used in REVTEX 3.1. However, the new scheme does differ from the old in that the `.rtx` file should define no syntactical extensions to REVTEX.

6 The revtex4 Document Class

Above, we took advantage of 1) the L^AT_EX definition of \ProvidesPackage and 2) that the line of code immediately afterwards follows the \ProvidesClass statement above.

```
171 %<*kernel>

```

6.1 Compatibility Processing

If the document has \documentstyle{revtex4}, then, instead of attempting to run in compatibility mode, just complain and exit.

```
180 \if@compatibility
181   \edef\reserved@a{\errhelp{%
182     Change your \string\documentstyle\space statement to
183     \string\documentclass\space and rerun.
184   }}\reserved@a
185   \errmessage{You cannot run \class@name\space in compatibility mode}%
186   \expandafter\@end
187 \fi
```

7 Extensions to the L^AT_EX Kernel

```
188 %</kernel>
```

Here, we incorporate the utility, frontmatter, and page grid packages. The ltxutil, ltxfront, and ltxgrid source are distributed with REVTEX.

Here begins the options DOCSTRIP module.

```
189 %<*options>
```

7.1 Hooks

\setup@hook The procedure \setup@hook serves as the vehicle for all code that gives values to the class's parameters once all the society, journal, options, and packages have been processed.

Arrange for journal substyles to set their own default values.

```
190 \let\setup@hook\empty
```

After preamble processing is complete, detect whether package longtable has been loaded and patch it.

```

191 \appdef\document@inithook{%
192   \switch@longtable
193   \let\LT@makecaption\LT@makecaption@rtx
194 }%
195 \def\LT@makecaption@rtx#1#2#3{%
196   \LT@mcol\LT@cols c{%
197     \hbox to\z@{%
198       \hss
199       \parbox[t]\LTcapwidth{%
200         \sbox\@tempboxa{\#1\#2: }#3\unskip\nobreak\vrule\@width\z@\@height\z@\@depth .5\baselineskip
201         \ifdim\wd\@tempboxa>\hsize
202           #1\#2: }#3\unskip\nobreak\vrule\@width\z@\@height\z@\@depth .5\baselineskip
203       \else
204         \hbox to\hsize{\hfil\box\@tempboxa\hfil}%
205       \fi
206       \endgraf
207     }%
208     \hss
209   }%
210 }%
211 }%
212 \def\protectdef@boldmath{%
213   \expandafter\ifnotrelax\csname boldmath \endcsname{}{%
214     \classinfo{Robustifying \string\LaTeX's \string\boldmath\space command}{%
215       \expandafter\let\csname boldmath \endcsname\boldmath
216       \expandafter\def\expandafter\boldmath\expandafter{\expandafter\protect\csname boldmath \endcsname
217     }%
218   }%
219 \appdef\document@inithook{%
220   \protectdef@boldmath
221 }%

```

\LT@makecaption We override the caption processing method of the `longtable` package: space below the caption is created via strut instead of whitespace.

\robust@boldmath Robustify the `\boldmath` command. If Team L^AT_EX (or any package) ever gets around to fixing this problem, we will bow out. (This fix relates to bug #394.)

8 Compatability with the geometry package

The `geometry` package of Hideo Umeki provides a way to specify the metrics of the media and page layout. We want to ensure that REV^LT_EX does not foreclose on the use of this or any other such package, nor to interfere with explicit assignments of such metric parameters within the document preamble.

The L^AT_EX parameters (resp. T_EX primitives) set by `geometry` are: `\paperwidth`, `\paperheight`, `\textwidth`, `\textheight`, `\topmargin`, `\headheight`, `\headsep`, `\footskip`, `\skip\footins`, `\marginparwidth`, `\marginparsep`, `\oddsidemargin`,

```
\evensidemargin, \columnsep, \hoffset, \voffset, \mag, \if@twocolumn,  
\if@twoside, \if@mparswitch, \if@reversemargin,
```

REVTEX's assignments can be overridden by any package or other statement in the document preamble, so it should be compatible.

FIXME: one parameter is rendered semantically void (by `ltxgrid.dtx`):
`\if@twocolumn`.

9 Options

9.1 Define Booleans Used in Options

The following Booleans are used within the document class to allow the document or the substyle to make selections of formatting. An explicit document class option overrides an assignment made by a substyle.

9.2 Declare Options

9.2.1 Checkin: for Editorial Use

A document class option declaring that the document is being processed by the editorial staff.

This option should:

- put date in footer along with folio
- Have the effect of selecting the `preprint` class option.
- Have the effect of selecting the `showpacs` class option.
- specify that when a float is placed h or H, it will be allowed to break over pages. (Note: be sure that if the enclosed `tabular` has an optional argument, you change it to [v], or remove it entirely.)

```
222 \DeclareOption{checkin}{%  
223   \@booleantrue\dateinRH@sw  
224   \@booleantrue\preprintsty@sw  
225   \def\@pointsize{12}%"  
226   \@booleantrue\showPACS@sw  
227   \@booleantrue\showKEYS@sw  
228   \def\fp@proc@h{\allow@breaking@tables}%"  
229   \def\fp@proc@H{\allow@breaking@tables}%"  
230 }%"  
231 \@booleanfalse\dateinRH@sw  
232 \def\checkindate{\dateinRH@sw{\tiny(\today)}}{}%"  
233 \def\allow@breaking@tables{%"  
234   \def\array@default{v}%" tabular can break over pages  
235   \@booleanfalse\floats@sw % table can break over pages  
236 }%"
```

9.2.2 Preprint Style

```
\preprintsty@sw The boolean \preprintsty@sw signifies that the document is to be formatted in  
preprint style.  
237 \DeclareOption{preprint}{%  
238   \@booleantrue\preprintsty@sw  
239   \ExecuteOptions{12pt}%">  
240 }%  
241 \DeclareOption{reprint}{%  
242   \@booleanfalse\preprintsty@sw  
243   \@booleantrue\twocolumn@sw  
244   \ExecuteOptions{10pt}%">  
245 }%  
246 \DeclareOption{manuscript}{%  
247   \class@warn{Document class option manuscript is obsolete; use preprint instead}%">  
248   \ExecuteOptions{preprint}%">  
249 }%  
250 \@booleanfalse\preprintsty@sw  
  
\showPACS@sw If \showPACS@sw is true, print the PACS information in the title block, otherwise  
\showKEYS@sw not. Similarly for \showKEYS@sw and the keywords.
```

9.2.3 Showing PACS and keywords

```
251 \DeclareOption{showpacs}{%  
252   \@booleantrue\showPACS@sw  
253 }%  
254 \DeclareOption{noshowpacs}{%  
255   \@booleanfalse\showPACS@sw  
256 }%  
257 \DeclareOption{showkeys}{%  
258   \@booleantrue\showKEYS@sw  
259 }%  
260 \DeclareOption{noshowkeys}{%  
261   \@booleanfalse\showKEYS@sw  
262 }%  
263 \@booleanfalse\showPACS@sw  
264 \@booleanfalse\showKEYS@sw
```

9.2.4 Balance the last page when in two-column page grid

\balancelastpage@sw If we are in a two-column page grid, we may wish to balance the columns of the last page. This will be done automatically if the `twocolumn` document class option is chosen. This action will be turned off by the `nobalancelastpage`. A complementary class option, `balancelastpage` is also provided.

```
265 \DeclareOption{balancelastpage}{%  
266   \@booleantrue\balancelastpage@sw  
267 }%  
268 \DeclareOption{nobalancelastpage}{%  
269   \@booleanfalse\balancelastpage@sw
```

```

270 }%
271 \@booleantrue\balancelastpage@sw

```

9.2.5 Showing preprint numbers

- \preprint@sw The boolean \preprint@sw signifies that the preprints (cf. \preprint) are to be formatted (usually on the title page). The option `preprintnumbers` declares to do so, `nopreprintnumbers` declares not to; the default is to follow \preprintsty@sw.

```

272 \DeclareOption{nopreprintnumbers}{\@booleanfalse\preprint@sw}%
273 \DeclareOption{preprintnumbers}{\@booleantrue\preprint@sw}%
274 \let\preprint@sw\preprintsty@sw

```

9.2.6 Hypertext Option

```
275 \DeclareOption{hyperref}{%
```

The following code had been commented out, it is now truly a comment:

```

% \AtEndOfClass{%
%   \begingroup
%     \edef\@tempa{%
%       \let
%         \noexpand\@clsextension
%       \noexpand\@empty
%       \noexpand\RequirePackage{hyperref}%
%       \def\noexpand
%         \@clsextension{\@clsextension}%
%     }%
%     \expandafter
%     \endgroup
%     \@tempa
%   }%
%   \def\@pointsize{10}%
%
```

If you have a hyper-foo enabled browser you may prefer this format which does not print the URL for the home page, but just makes the name a link, but by default print it so it works on paper.

```
276 \class@warn{Class option "hyperref" is no longer supported.^^JEmploy \string\usepackage{hyperr
277 }%
```

9.2.7 Type Size

Use \@pointsize=10 rather than \@ptsize=0 to allow easy extensions to 9pt or whatever. Note: the three alternatives are mutually exclusive.

At this point, the parameter \@pointsize is set to \undefined: a society *must* give it a definition.

```

278 \DeclareOption{10pt}{\def\@pointsize{10}}%
279 \DeclareOption{11pt}{\def\@pointsize{11}}%

```

```
280 \DeclareOption{12pt}{\def\@pointsize{12}}%
281 \let\@pointsize\@undefined
```

9.2.8 Media Size

```
\paperheight
\paperwidth 282 \DeclareOption{a4paper}{%
283     \setlength\paperheight {297mm}%
284     \setlength\paperwidth {210mm}%
285 }%
286 \DeclareOption{a5paper}{%
287     \setlength\paperheight {210mm}%
288     \setlength\paperwidth {148mm}%
289 }%
290 \DeclareOption{b5paper}{%
291     \setlength\paperheight {250mm}%
292     \setlength\paperwidth {176mm}%
293 }%
294 \DeclareOption{letterpaper}{%
295     \setlength\paperheight {11in}%
296     \setlength\paperwidth {8.5in}%
297 }%
298 \DeclareOption{legalpaper}{%
299     \setlength\paperheight {14in}%
300     \setlength\paperwidth {8.5in}%
301 }%
302 \DeclareOption{executivepaper}{%
303     \setlength\paperheight {10.5in}%
304     \setlength\paperwidth {7.25in}%
305 }%
306 \DeclareOption{landscape}{%
307     \setlength\@tempdima {\paperheight}%
308     \setlength\paperheight {\paperwidth}%
309     \setlength\paperwidth {\@tempdima}%
310 }%
311 \ds@letterpaper

Effectively select letterpaper.
```

9.2.9 Bibnotes

```
\frontmatter@footnote@produce Frontmatter footnotes result from frontmatter commands like \email, \homepage,
\altaffiliation, and \thanks. The default for \frontmatter@footnote@produce
is \frontmatter@footnote@produce@footnote, which formats the frontmatter
footnotes at the foot of the title page. The bibnotes class option defers them to
the bibliography.

312 \DeclareOption{bibnotes}{\let\frontmatter@footnote@produce\frontmatter@footnote@produce@endnote}
313 \DeclareOption{nobibnotes}{\let\frontmatter@footnote@produce\frontmatter@footnote@produce@footnote}
314 \let\frontmatter@footnote@produce\frontmatter@footnote@produce@footnote
```

```
315 \appdef\class@enddocumenthook{\auto@bib}%
```

9.2.10 Footinbib

\footinbib@sw The boolean `\footinbib@sw` signifies that text footnotes are to be set in the bibliography, as endnotes.

The document may set the value one way or the other via the following two class options.

```
316 \DeclareOption{footinbib}{\@booleantrue\footinbib@sw}
317 \DeclareOption{nofootinbib}{\@booleanfalse\footinbib@sw}
```

The default value is `\false@sw`, and the society or journal may override the default.

```
318 \@booleanfalse\footinbib@sw
```

9.2.11 altaffilletter

\altaffilletter@sw Determine the procedure `\thefootnote` used in frontmatter: the footnote symbol used in titlepage footnotes.

```
319 \DeclareOption{altaffilletter}{\@booleantrue\altaffilletter@sw}%
320 \DeclareOption{altaffilsymbol}{\@booleanfalse\altaffilletter@sw}%
321 \@booleanfalse\altaffilletter@sw
```

9.2.12 superbib

\place@bibnumber The procedure `\place@bibnumber` produces the number at the head of the `\bibitem`, in the bibliography. By default, it has the `\bibnumfmt` meaning assigned by the `natbib` package. It may be overridden by society, journal, or by the document options.

```
322 \DeclareOption{superbib}{%
323   \let\place@bibnumber\place@bibnumber@sup
324 }%
325 \def\place@bibnumber{\NATx@\bibnumfmt}%

```

\place@bibnumber@sup For producing the `\bibitem` device, we define two procedures to select from.

\place@bibnumber@inl Note that we could have used `natbib`'s `\ifNAT@super` switch, but it does not allow for altering the meaning of `\bibnumfmt`.

```
326 \def\place@bibnumber@sup{\textsuperscript{#1}}%
327 \def\place@bibnumber@inl{[#1]}%
```

9.2.13 citeautoscript

\citeautoscript@sw This class option allows you to automatically accomodate a change from non-superscripted, numbered references to superscripted, bunmbered references.

Note: you should always mark up your document with the assumption that references are *not* going to be superscripted. Otherwise this option has no hope of working properly.

```

328 \DeclareOption{citeautoscript}{\@booleantrue\citeautoscript@sw}%
329 \@booleanfalse\citeautoscript@sw

```

9.2.14 Variants on the Bibliography Style

REV_{TEX} anticipates that a society or journal will provide two related Bib_{TEX}bibliography style variants, designating one as the default. A pair of document class options `longbibliography` and `nolongbibliography` allows the user to explicitly select between them.

`\longbibliography@sw` REV_{TEX}'s default for `\longbibliography@sw` is `\false@sw`.

Here is a suggested convention for societies and journals that provide two alternative Bib_{TEX} styles: if one is named, say, `apsrev.bst`, then name the alternative `apsrevlong.bst`. Then invoke the code:

```

%\appdef\setup@hook{%
% \longbibliography@sw{%
%   \appdef{@bibstyle}{long}%
% }{%
% }%
%
%
330 \DeclareOption{longbibliography}{\@booleantrue\longbibliography@sw}%
331 \DeclareOption{nolongbibliography}{\@booleanfalse\longbibliography@sw}%
332 \@booleanfalse\longbibliography@sw

```

9.2.15 Simplex/Duplex Pages

`\twoside@sw` The flag `\twoside@sw` signifies that the document is to be formatted for duplex printing. After the preamble is processed, we align the value of the kernel `\newif` switch `\if@twoside` to that of `\twoside@sw`. `\if@twoside` itself is used in the kernel's `\cleardoublepage` and `\@outputpage` procedures.

```

333 \@booleanfalse\twoside@sw
334 \appdef\document@inithook{%
335   \twoside@sw{\@twosidetrue}{\@twosidefalse}%
336 }

```

The complementary options `twoside` and `oneside` assert formatting for duplex or simplex printing, respectively. At the same time, we arrange for the selection of the page grid with respect to the marginal column: Because `\if@reversemargin` remains default (false), if duplex printing, this column will always be on the (right), if simplex printing, it will always be on the (outside). QUERY: correct choice? FIXME: assign `\if@mparswitch` later (and protect the assignment, too).

```

337 \DeclareOption{twoside}{\@booleantrue \twoside@sw\@mparswitchfalse}%
338 \DeclareOption{oneside}{\@booleanfalse\twoside@sw\@mparswitchtrue}%

```

9.2.16 Two-Column Page Grid

\twocolumn@sw The flag \twocolumn@sw signifies that the document is to be formatted in the two-column page grid.

If no options relating to page grid are invoked by \AtBeginDocument time, we set default values. Up to that point, the class can check if \twocolumn@sw is \undefined to see if any related options have been invoked.

We install into \class@enddocumenthook all tasks that we know must be completed at \AtEndDocument time. The first thing it does is end the current paragraph. The last is to return us to one-column page grid. (This procedure is executed after all typesetting is complete i.e., after items like \printtables.)

```
339 \def\clear@document{%
340   \close@column
341 }%
```

`onecolumn` specifies one-column page grid. The `twocolumn` class option employs the standard mechanism for changing the column grid: the `ltxgrid` package.

```
342 \DeclareOption{onecolumn}{\@booleanfalse\twocolumn@sw}%
343 \DeclareOption{twocolumn}{\@booleantrue \twocolumn@sw}%
344 \@booleanfalse\twocolumn@sw
```

The column grid is determined by the state of the switch \twocolumn@sw and is effected at \class@documenthook time. The society or journal file may re-define \select@column@grid to accomodate, e.g., more than two choices for the page grid.

Note that \open@column@two adds items to the Main Vertical List, so constitutes the true beginning of the document.

Note also that if the selected column grid is a one-column grid, there is nothing to do, because `ltxgrid` has already set that up via \begindocumenthook.

```
345 \def\select@column@grid{%
346   \twocolumn@sw{%
347     \open@twocolumn
348   }{%
349   } \open@onecolumn
350 }{%
351 }%
352 \appdef\class@documenthook{%
353   \select@column@grid
354 }%
```

\authoryear@sw The boolean \authoryear@sw signifies that we are to use author-year citations rather than numerical citations.

The `author-year` class option selects “author-year” citations; `numerical` selects “numerical” citations. The former is the default.

```
355 \DeclareOption{author-year}{\@booleantrue\authoryear@sw}%
356 \DeclareOption{numerical}{\@booleanfalse\authoryear@sw}%
357 \@booleanfalse\authoryear@sw
```

\galley@sw The boolean \galley@sw signifies that the document is to be formatted in galley style.

Asserting both \galley@sw and \preprintsty@sw may produce strange formatting results, but it is not illegal. However, it *is* illegal to assert galley and any twocolumn option.

galley emulates setting the galleys of a two-column journal. CHANGED: this option should effectively set \preprintsty@sw false. NOTE: it makes no sense to assert both galley and twocolumn.

```
358 \DeclareOption{galley}{%
359   \ExecuteOptions{onecolumn}%
360   \@booleantrue\galley@sw
361   \@booleanfalse\preprintsty@sw
362   \appdef\setup@hook{%
363     \advance\textwidth-\columnsep
364     \textwidth.5\textwidth
365   }%
366 }%
367 \@booleanfalse\galley@sw
```

9.2.17 raggedbottom or flushbottom

\raggedcolumn@sw The class options `raggedbottom` and `flushbottom` determine whether the columns (page) are ragged bottom or flush bottom. Note that we do not select a default here; that is done by the journal substyle.

```
368 \DeclareOption{raggedbottom}{\@booleantrue\raggedcolumn@sw}
369 \DeclareOption{flushbottom}{\@booleanfalse\raggedcolumn@sw}
370 \@booleanfalse\raggedcolumn@sw
371 \appdef\setup@hook{%
372   \raggedcolumn@sw{\raggedbottom}{\flushbottom}%
373 }%
```

9.2.18 tightenlines

This class option specifies that standard leading is to be used to set the type. If lacking, the leading will be loose.

\tightenlines@sw The boolean \tightenlines@sw signifies that the leading is to be made standard amount. If false, it means that the leading is to be set extra open. Has no effect on 10pt size option.

```
374 \DeclareOption{tightenlines}{\@booleantrue\tightenlines@sw}
375 \@booleanfalse\tightenlines@sw
```

9.2.19 lengthcheck

\lengthcheck@sw The flag \lengthcheck@sw signifies that the length checking is in effect. It is up to the individual journal substyle to alter its formatting accordingly.

```
376 \@booleanfalse\lengthcheck@sw
```

This class option specifies that the formatted document should approach as closely as possible the formatting of an actual journal article to facilitate the author's performance of a length check.

FIXME: society or journal may have its own definition of this option.

```
377 \DeclareOption{lengthcheck}{%
378   \@booleantrue\lengthcheck@sw
379   \ExecuteOptions{reprint}%
380 }%
```

In addition, if length checking is in effect, we will enable the tally of text length.

```
381 \appdef\setup@hook{%
382   \lengthcheck@sw{\@booleantrue\tally@box@size@sw}{}%
383 }%
```

9.2.20 Draft and Final

`\draft@sw` The flag `\draft@sw` signifies that the document is to be formatted in draft mode.

```
384 \appdef\setup@hook{%
385   \draft@sw{\overfullrule 5\p@}{\overfullrule\z@}%
386 }%
```

Certain packages may pay attention to the class option `draft` that sets this Boolean.

```
387 \DeclareOption{draft}{\@booleantrue\draft@sw}%
388 \DeclareOption{final}{\@booleanfalse\draft@sw}%
389 \@booleanfalse\draft@sw
```

9.2.21 eqsecnum

`\eqsecnum@sw` The flag `\eqsecnum@sw` signifies that equations are to be numbered with the section, e.g., "Eq. (2.13)".

```
390 \appdef\setup@hook{%
391   \eqsecnum@sw{%
392     \@addtoreset{equation}{section}%
393     \def\theequation@prefix{\arabic{section}.}%
394   }{}%
395 }%
```

The `eqsecnum` class option signifies that equations are to be numbered within sections.

```
396 \DeclareOption{eqsecnum}{\@booleantrue\eqsecnum@sw}%
397 \@booleanfalse\eqsecnum@sw
```

9.2.22 secnumarabic

The `secnumarabic` class option signifies that sectioning commands are to be numbered arabic: the procedure `\secnums@arabic` is executed as the default. Otherwise, the procedure `\secnums@rtx` determines things. The society or journal

may redefine either procedure, and may change the definition of `\setup@secnums` itself, thereby establishing a different default.

```
398 \appdef\setup@hook{%
399   \setup@secnums
400 }%
401 \DeclareOption{secnumarabic}{%
402   \def\setup@secnums{\secnums@arabic}%
403 }%
404 \def\setup@secnums{\secnums@rtx}%
```

The code that defines `\secnums@rtx` and `\secnums@arabic` appears in Section 14.4.

fleqn FIXME: model fleqn after amsfonts. I no longer understand why I said this. fleqn.clo is not a package, so it can simply be \input.

```
405 \DeclareOption{fleqn}{%
406   \input{fleqn.clo}%
407 }%
```

9.2.23 floats/endfloats

`\floats@sw` The Boolean `\floats@sw` signifies that floats are to be floated; if false, that floats are to be deferred to the end of the document. By default, the former. Note that the state of this Boolean is to be changed by the document class in response to user-selected options.

This boolean and the assignment of its default value is done by the `ltxutil` package.

The Boolean `\floatp@sw` signifies that endfloats are to be set one per page; if false, that endfloats are to be set with multiple floats per page permitted. By default, the latter. Note that the state of this Boolean is to be changed by the document class in response to user-selected options. The default is established here.

These options control, via the Boolean `\floats@sw`, whether floats are to be migrated to the end of the document.

```
408 \DeclareOption{floats}{\@booleantrue\floats@sw\@booleanfalse\floatp@sw}
409 \DeclareOption{endfloats}{\@booleanfalse\floats@sw\@booleanfalse\floatp@sw}
410 \DeclareOption{endfloats*}{\@booleanfalse\floats@sw\@booleantrue\floatp@sw}
411 \@booleantrue\floats@sw
412 \@booleantrue\floatp@sw
```

9.2.24 titlepage/notitlepage

These options control, via `\titlepage@sw`, whether the title block is to be set on a separate page.

`\titlepage@sw` The flag `\titlepage@sw` signifies that a forced page break is to follow the title page: the article title appears on a page by itself.

```
413 \DeclareOption{titlepage}{\@booleantrue\titlepage@sw}
```

```

414 \DeclareOption{notitlepage}{\@booleanfalse\titleread@sw}
415 \@booleanfalse\titleread@sw

```

9.2.25 Substyle and Sub-substyle

\change@society If the society or, resp., journal has already been assigned, notify user whether it
 \change@journal is being overridden.

```

416 \def\change@society#1{%
417   \def\@tempa{#1}%
418   \@ifxundefined\@society{%
419     \class@info{Selecting society \@tempa}%
420     \let\@society\@tempa
421   }{%
422     \@ifx{\@tempa\@society}{}{%
423       \class@warn{Conflicting society \@tempa<>\@society; not selected}%
424     }%
425   }%
426 }%
427 \def\change@journal#1{%
428   \def\@tempa{#1}%
429   \@ifxundefined\@journal{%
430     \class@info{Selecting journal \@tempa}%
431     \let\@journal\@tempa
432   }{%
433     \@ifx{\@tempa\@journal}{}{%
434       \class@warn{Conflicting journal \@tempa<>\@journal; not selected}%
435     }%
436   }%
437 }%

```

Here had been the class options relating to the APS. Now that all societies are on an equal footing, this code is in the respective .rtx file.

9.2.26 Optical Society of America

Here are the class options relating to the Optical Society of America.

Note: as of 2008, the only OSA module being distributed by ctan is osajnl.rtx. The class options declared here are, I think, unused.

```

438 \DeclareOption{osa}{\change@society{osa}\let\@journal\@undefined}%
439 \DeclareOption{osameet}{\change@society{osa}\def\@journal{osameet}}%
440 \DeclareOption{opex}{\change@society{osa}\def\@journal{opex}}%
441 \DeclareOption{tops}{\change@society{osa}\def\@journal{tops}}%
442 \DeclareOption{josa}{\change@society{osa}\def\@journal{josa}}%

```

\rtx@require@packages The procedure \rtx@require@packages accumulates all \RequirePackage statements in the course of loading the document class. Carrying out these operations at that time is needed: \ProcessOptions must be executed first.

```
443 \let\rtx@require@packages\empty
```

- \MakeUppercase We load the `textcase` package of David Carlisle. Now that its bug of long standing has been repaired, we no longer need to doctor it up. And, because its loading has been deferred until `\rtx@require@packages` time, we no longer override L^AT_EX here. Instead, the `textcase` package will be asked to do that.

```
444 \appdef\rtx@require@packages{%
445   \RequirePackage[overload]{textcase}%
446 }%
```

The following code used to let the `textcase` commands override those of L^AT_EX:

```
%\appdef\setup@hook{%
% \expandafter
% \let\csname MakeUppercase \expandafter\endcsname
%   \csname MakeTextUppercase \endcsname
% \expandafter
% \let\csname MakeLowercase \expandafter\endcsname
%   \csname MakeTextLowercase \endcsname
% }%
%
```

- amsfonts** The class option `amsfonts` has the same effect as if the document preamble contained a `\usepackage{amsfonts}` statement.

```
447 \DeclareOption{amsfonts}{%
448   \def\class@amsfonts{\RequirePackage{amsfonts}}%
449 }%
450 \DeclareOption{noamsfonts}{%
451   \let\class@amsfonts\empty
452 }%
453 \appdef\rtx@require@packages{%
454   @ifxundefined\class@amsfonts{}{\class@amsfonts}%
455 }%
```

- amssymb** The class option `amssymb` has the same effect as if the document preamble contained a `\usepackage{amssymb}` statement.

```
456 \DeclareOption{amssymb}{%
457   \def\class@amssymb{\RequirePackage{amssymb}}%
458 }%
459 \DeclareOption{noamssymb}{%
460   \let\class@amssymb\empty
461 }%
462 \appdef\rtx@require@packages{%
463   @ifxundefined\class@amssymb{}{\class@amssymb}%
464 }%
```

- amsmath** The class option `amsmath` has the same effect as if the document preamble contained a `\usepackage{amsmath}` statement.

We require version 1.2 (date stamped 1997/03/20) or later. The `\ver@amsmath.sty`, will

LATEX note: Certain LATEX procedures have an arbitrary and pointless restriction that they may be used only within the preamble. We get around this by preserving the procedures in private `\csnames`.

FIXME note: it is difficult to ensure that an error summary will be printed on the console at the very end, but `ltxgrid` allows accomplishing this via an interrupt, put down at `\AtEndDocument` time.

```

465 \DeclareOption{amsmath}{%
466   \def\class@amsmath{\RequirePackage{amsmath}[\ver@amsmath@prefer]}%
467 }%
468 \DeclareOption{noamsmath}{%

509 \def\ver@amsmath@prefer{2000/01/15 v2.05 AMS math features}%

```

9.2.27 Presenting Authors and Their Affiliations

Class options for presenting authors and their affiliations are now defined in `ltxfront.dtx`.

9.2.28 Typeset by REVTEX

`\byrevtex@sw` The flag `\byrevtex@sw` signifies that the document should bear an imprint to the effect that it was formatted by this document class.

The class option `byrevtex` signifies that you want the “Typeset by REVTEX” byline to appear on your formatted output. By default, no such byline appears.

```

510 \DeclareOption{byrevtex}{\@booleantrue\byrevtex@sw}%
511 \@booleanfalse\byrevtex@sw

```

9.3 Attempt to fix float placement failure

`\force@deferlist@sw` REVTEX uses the `ltxgrid` package, which provides the ability to attempt repairs when L^AT_EX’s float placement mechanism is about to fail, but that facility is turned off by default. Users should invoke the `floatfix` document class option to enable this L^AT_EX extension. If not, a helpful message is printed in the log, indicating how to work around the difficulty.

```

512 \DeclareOption{floatfix}{\@booleantrue\force@deferlist@sw}%
513 \DeclareOption{nofloatfix}{\@booleanfalse\force@deferlist@sw}%
514 \@booleanfalse\force@deferlist@sw

```

`\@fltovf` The L^AT_EX kernel error message `\@fltovf` may now be a bit more helpful to the `\@fltstk` user; likewise for the `\@fltstk` message of `ltxgrid`.

```

515 \gdef\@fltovf{%
516   \@latex@error{%
517     Too many unprocessed floats%
518     \force@deferlist@sw{}; try class option [floatfix]}%
519   }\@ehb
520 }%
521 \def\@fltstk{%
522   \@latex@warning{%
523     A float is stuck (cannot be placed)%
524     \force@deferlist@sw{}; try class option [floatfix]}%
525 }%
526 }%

```

`\ltxgrid@info@sw` The two options `ltxgridinfo` and `outputdebug` turn on informative diagnostics
`\outputdebug@sw` within the package `ltxgrid`. Only people who really want to see this output will select these class options. Consult documentation for the `ltxgrid` package to see what output the related switches enable.

```

527 \DeclareOption{ltxgridinfo}{\@booleantrue\ltxgrid@info@sw}%
528 \DeclareOption{outputdebug}{\@booleantrue\outputdebug@sw}%

```

9.4 Option to relax page height

- \textheight@sw The `ltxgrid` package can set text pages to their natural height or force them to the full text height; the latter is the default. If setting the pages with a variable length, the running foot will move up or down with the natural length of the text column. While I recommend against doing so, this option will turn that switch to the latter setting.
- ```

529 \DeclareOption{raggedfooter}{\@booleanfalse\textheight@sw}%
530 \DeclareOption{noraggedfooter}{\@booleantrue\textheight@sw}%

```

## 9.5 Selecting procedure for processing abstract

Code defining options `newabstract` and `oldabstract` has been removed.

## 9.6 Option to turn on diagnostics in the frontmatter

- \frontmatterverbose@sw A diagnostic option, not for the average enduser, which reveals the workings of the frontmatter. This code interfaces to that of `ltxfront.dtx`.
- ```

531 \DeclareOption{frontmatterverbose}{\@booleantrue\frontmatterverbose@sw}%
532 \@booleanfalse\frontmatterverbose@sw

```
- \linenumbers@sw An option to number the lines of type in the output in the manner of `revtex4-1.dtxlineno.sty`.
At present, we use that very package to implement this functionality. This means that users may modify the workings of that package per its documentation (which see).
- ```

533 \DeclareOption{linenumbers}{%
534 \appdef{\rtx@require@packages}{%
535 \RequirePackage{lineno}[2005/11/02 v4.41]%
536 \linenumbersep4pt\relax
537 \linenumbers\relax
538 }%
539 }%

```
- By default, line numbering is off.
- \NAT@merge Add class option `nomerge`, to turn off `natbib` 8.3 syntax for citation key. The default value of REVTeX 4.1 for \NAT@merge is `\thr@@`, which turns on the new syntax along with its semantics. Legacy documents that would be incompatible with the new syntax can be successfully processed with class option `nomerge`.
- ```

540 \DeclareOption{nomerge}{%
541   \appdef{\setup@hook}{%
542     \@ifnum{\NAT@merge>\z@}{\let\NAT@merge\z@}{%
543   }%
544 }%

```

9.7 Default Option, Society, Journal, and pointsize

This change will not break OSA documents because that society is still built in to revtex4.

<pre>\@parse@class@options@society \@parse@class@options@</pre>	<p>The procedure <code>\@parse@class@options@society</code> parses the options passed to this document class for the <code>\@society</code>. It is like <code>\ProcessOptions*</code> in that it accesses <code>\@optionlist{\@currname.\@currext}</code>. Any undefined option is considered: if there is a corresponding <code>.rtx</code> file, it will change the society accordingly and define a placeholder class option for the society thus found (thus preventing a spurious "option not found" message).</p>
---	---

<pre>545 \def\@parse@class@options@society{% 546 \edef@\tempa{\@optionlist{\@currname.\@currext}}% 547 \expandafter\@for\expandafter\CurrentOption\expandafter:\expandafter=\@tempa\do{% 548 \expandafter\@ifnotrelax\csname ds@\CurrentOption\endcsname{}{% 549 \IfFileExists{\CurrentOption\substyle@post.\substyle@ext}{% 550 \expandafter\change@society\expandafter{\CurrentOption}% 551 \expandafter\let\csname ds@\CurrentOption\endcsname\@empty 552 }{}% 553 }% 554 }% 555 }% 556 \def\@parse@class@options##1{% 557 \edef@\tempa{\@optionlist{\@currname.\@currext}}% 558 \expandafter\@for\expandafter\CurrentOption\expandafter:\expandafter=\@tempa\do{% 559 \expandafter\@ifnotrelax\csname ds@\CurrentOption\endcsname{% 560 \begingroup\csname ds@\CurrentOption\endcsname 561 \@ifundefined##1{% 562 \endgroup 563 }{% 564 \expandafter\endgroup\expandafter\def\expandafter##1\expandafter{##1}% 565 }% 566 }{}% 567 }% 568 }% 569 \def\@parse@class@options@journal{% 570 \edef@\tempa{\@optionlist{\@currname.\@currext}}% 571 \expandafter\@for\expandafter\CurrentOption\expandafter:\expandafter=\@tempa\do{% 572 \expandafter\@ifnotrelax\csname ds@\CurrentOption\endcsname{% 573 \begingroup 574 \csname ds@\CurrentOption\endcsname 575 \@ifundefined{\@journal}{% 576 \endgroup 577 }{% 578 \expandafter\endgroup\expandafter\def\expandafter{\@journal}\expandafter{\@journal}% 579 }% 580 }{}%</pre>

598       }{}%
599     }%
600   }%
601 }%

```

The default handling for a document class option depends upon whether the `\@society` is defined.

If not, then hunt for a `.rtx` file with that name. If it exists, then we will take this option as the name of the society, otherwise, declare the option as not used.

(This behavior is similar to the L^AT_EX2.09 handling, where one looked for a `.sty` file, except that in this case, we must provide for journal substyles that may be defined in the society file, or have their own journal substyle file.)

At the point where the class file is finished loading, we then read in the society file. That file can define further class options, such as the journal substyle.

For users, this will mean that they can specify the society and journal simply by specifying first the former and then the latter among their document class options. The society *must* have a corresponding `.rtx`.

```

602 %</options>
603 %<*package>

\@process@society
\@process@journal
\@process@pointsize
604 \def\substyle@post{4-1}%
605 \def\substyle@ext{rtx}%
606 \DeclareOption*{\OptionNotUsed}%

```

A society substyle may define its own options, via `\DeclareOption`.

At the end of this document class, we process the society file, using `aps.rtx` if none has been specified in the document.

```

607 \def\@process@society#1{%
608   \@ifxundefined\@society{%
609     \class@warn{No Society specified, using default society #1}%

```

```

610   \def\@society{\#1}\let\@journal\@undefined
611   }{}%
612   \expandafter\input\expandafter{\@society\substyle@post.\substyle@ext}%
613 }%

```

A society substyle can encompass any number of journal substyles; we use the following procedure to invoke the proper one.

```

614 \def\@process@journal#1{%
615   \@ifxundefined\@journal{%
616     \class@warn{No journal specified, using default #1}%
617     \def\@journal{\#1}%
618   }{}%
619   \expandafter\expandafter
620   \expandafter\rtx@do@\substyle
621   \expandafter\expandafter
622   \expandafter{\expandafter\@society\@journal}%
623 }%
624 \def\rtx@do@\substyle#1{%
625   \InputIfFileExists{\#1\substyle@post.\substyle@ext}{}{\csname rtx@\#1\endcsname}%
626 }%

```

Document class options 10pt, 11pt, and 12pt are implemented by REVTEX itself and determine \@pointsize. These provide formatting settings appropriate to the society's journals.

If not specified by the document, a value \@pointsize@default is used. This default can be set by the journal. Here, the society sets its default.

```

627 \def\@process@pointsize#1{%
628   \@ifxundefined\@pointsize{%
629     \def\@pointsize{\#1}%
630     \class@warn{No type size specified, using default \@pointsize}%
631   }{}%
632   \expandafter\expandafter
633   \expandafter\rtx@do@\substyle
634   \expandafter\expandafter
635   \expandafter{\expandafter\@society\@pointsize pt}%
636 }%

```

9.8 Class-Asserted Options

Here we establish the default document class options. Those of the document itself will override these.

10 Procedures Dependent Upon Options

Here we introduce `classes.dtx` definitions for the page styles that people will expect to be able to use.

```

```

\lastpage@putlabel Support the default meaning of \endpage. Name of this macro (and the \label key) taken from [CTAN:macros/latex/contrib/other/lastpage](#) with code optimised slightly.

```

706 \def\lastpage@putlabel{%
707     \if@filesw
708         \begingroup
709             \advance\c@page\m@ne
710             \immediate\write\auxout{\string\newlabel{LastPage}{}{\thepage}}%
711         \endgroup
712     \fi
713 }%

```

Install a procedure into document endgame processing that labels the last page of the document. This is done just before the .aux file is closed, and does not require a \shipout, because it writes directly to the .aux file. Note that we invoke \clearpage: this means that no more typesetting should be done past this point.

```

714 \appdef\clear@document{%
715     \clearpage
716     \lastpage@putlabel
717     \tally@box@size@sw{\total@text}{}%
718 }%
719 \providecommand\write@column@totals{}%

```

11 Required Packages

[CTAN:macros/latex/contrib/other/misc/url.sty](#)

```
720 \appdef\rtx@require@packages{%
721   \RequirePackage{url}%
722 }%
```

12 Incompatible Packages

We wait until after the preamble is processed, then check for any packages that might have been loaded which we know to be incompatible with REVTEX.

The `multicol` package is incompatible with `ltxgrid`, which replaces it. The `cite` package is incompatible with `natbib`, which replaces its functionality. The functionality of the `mcite` package is provided by `natbib`.

```
723 \appdef\document@inithook{%
724   \incompatible@package{cite}%
725   \incompatible@package{mcite}%
726   \incompatible@package{multicol}%
727 }%
```

13 Society- and Journal-Specific Code

`\@journal` Journal test helper, used as

```
%\cifx{\@journal\journal@pra}{%
%  \i;journal-specific setup}
%\fi
%
```

Journal code might like to further specify (if as yet undefined) or distinguish on the following Booleans.

Note: the journal substyle code should only alter the value of one of these Booleans if the Boolean is `\undefined`. This convention is what makes the document's options take precedence over the values set by the journal.

FIXME: make this table an exhaustive listing of all the parameters set by the class options.

\@pointsize	(101112), depending on the type size
\footinbib@sw	true if footnotes are to be formatted in the bibliography
\preprintsty@sw	true for preprint and hyperpreprint
\eqsecnum@sw	true means that equations are numbered within sections
\groupauthors@sw	true means authors listed separately for each address
\preprint@sw	true means to produce the preprint numbers as part of the title block
\showPACS@sw	true means to produce the PACS as part of the title block
\showKEYS@sw	true means to produce the keywords as part of the title block
\affils@sw	true means each affiliation is printed, for each author
\runinaddress@sw	true means author addresses are printed run-in
\draft@sw	true implies that PACS will be printed
\tightenlines@sw	true if preprint single spaced
\lengthcheck@sw	true if length checking is in effect
\byrevtex@sw	true means to announce “typeset by REVTEX”
\titlepage@sw	true for title is to be set on a separate page
\twocolumn@sw	true if two-column page grid
\twocolumn@sw	true if we are to automatically balance the columns of the last page
\twoside@sw	true means to format pages for duplex printing
\floats@sw	false means floats are migrated to end of document
\floatp@sw	true means endfloats are set one to a page
\class@amsfonts	if \empty, means that amsfonts will <i>not</i> be loaded
\class@amssymb	if \empty, means that amssymb will <i>not</i> be loaded
\frontmatter@footnote	if \undefined, means that the default (\footnote) will be used
\place@bibnumber	if \undefined, means that the default (inline) will be used

Note: if \twocolumn@sw and \preprintsty@sw are both false, then ‘galley’ style is in effect. The **galley** option invokes **onecolumn**, but does not affect the \preprintsty@sw.

Note: \paperwidth and \paperheight are not integrated into this scheme, and should be selected by the document alone.

14 Body

14.1 counters

The following definitions are probably identical to those in **classes.dtx**

```

728 \def\labelenumi{\theenumi.}
729 \def\theenumi{\arabic{enumi}}
730 \def\labelenumii{(\theenumii)}

14.4 Sectioning Commands

14.4.1 Sectioning Commands and Their Productions

The following counters are defined by LaTeX's standard document classes. We do likewise, then assign flag values to the productions, awaiting overrides.

```

787 \newcounter{part}%
788 \let\thepart\@undefined
789 \newcounter{section}%
790 \let\thesection\@undefined
791 \newcounter{subsection}[section]%
792 \let\thesubsection\@undefined
793 \newcounter{subsubsection}[subsection]%
794 \let\thesubsubsection\@undefined
795 \newcounter{paragraph}[subsubsection]%
796 \let\theparagraph\@undefined
797 \newcounter{subparagraph}[paragraph]%
798 \let\thesubparagraph\@undefined

```

The procedure invoked by `\setup@secnums` provides meanings for these productions.

`\secnums@rtx` These two procedures define the meanings of each of the productions of the counters of the sectioning commands, but only if nothing else has defined it.

```

```

14.9.1 Deferring table Floats

After all packages are loaded, we decide if tables will float or will be deferred until `\printtables` time.

We also deal with the possibility of `longtable` environments.

```
1065 \def\set@table@environments{%
1066   \floats@sw{}{%
1067     \let@environment{longtable@float}{longtable}%
1068     \let@environment{longtable}{longtable@write}%
1069     \let@environment{longtable*@float}{longtable*}%
1070     \let@environment{longtable*}{longtable*@write}%
1071     \let@environment{turnpage@float}{turnpage}%
1072     \let@environment{turnpage}{turnpage@write}%
1073   }%
1074   \do@if@floats{table}{.tbx}%
1075 }%
1076 \appdef\document@inithook{%
1077   \set@table@environments
1078 }%
1079 \appdef\class@enddocumenthook{%
1080   \printtables\relax
1081 }%
1082 \newenvironment{longtable@write}{%
1083   \write@@float{longtable}{table}%
1084 }{%
1085   \endwrite@float
1086 }%
1087 \newenvironment{longtable*@write}{%
1088   \write@@float{longtable*}{table}%
1089 }{%
1090   \endwrite@float
1091 }%
1092 \newenvironment{turnpage@write}{%
1093   \immediate\write\tablewrite{\string\begin{turnpage}}%
1094 }{%
1095   \immediate\write\tablewrite{\string\end{turnpage}}%
1096 }
```

`\printtables` The user-level command `\printtables` determines where the tables are to appear in a document in which `\floats@sw` is false. If the user invokes the `nofloats` and fails to insert a `\printtables` command, the tables will be printed at the end of the document. If the command is given, but floats are not being deferred, it amounts to a no-op.

```
1097 \newcommand\printtables{%
1098   \begingroup
1099   \let@environment{longtable}{longtable@float}%
1100   \let@environment{longtable*}{longtable*@float}%

16.1 Citations, Bibliography, Endnotes

16.1.1 Bibliography

Load Patrick Daly's `natbib` package, <ftp://ctan.tug.org/macros/latex/contrib/supported/natbib>

Note that `natbib` assumes that it loads over a document class, such as the `article` class, that has already defined `thebibliography` and `\@listi`.

Note also that `natbib` also installs a command `\NAT@set@cites` into `\AtBeginDocument` which presumes that the proper `\bibpunct` command has been issued.

Note that the macro `\NAT@sort` controls whether citations are left alone (`\NAT@sort=0`), sorted (`\NAT@sort=1`), or sorted and compressed (`\NAT@sort=2`). Since we give `natbib` the `sort&compress` option, if you prefer `sort`, you need only `\let\NAT@sort` to be `\@ne`. However, if you prefer the effect of having neither `sort` nor `sort&compress`, you must `\let\NAT@sort` to be `\z@` and you must also define `\let\NAT@cmprs` to be `\z@`.

As of version 8.2, `natbib` now no longer binds at the point where it is read in. This means that we can freely change `\NAT@sort`, `\NAT@cmprs`, and the new `\NAT@merge`. Henceforth, we require that this later version be used.

For other `natbib` customizations, you may proceed as if you were going to use the `natbib.cfg` file: anything that you can modify by this means is fair game. Once REVTeX is finished loading, you can assert any definitions for `natbib` that you wish.

<code>\rev@citet</code> <code>\rev@citealp</code> <code>\rev@citealpnum</code>	We define variants on <code>natbib</code> 's commands <code>\citet</code> , <code>\citealp</code> , and <code>\citealpnum</code> . <code>\rev@citealpnum</code> uses a numerical citation. <code>\rev@citealp</code> and <code>\rev@citealpnum</code> are the aliases of <code>\onlinecite</code> , <code>\rev@citet</code> that of <code>\textcite</code> .
--	--

In each case, we invoke `\rtx@swap@citea` to effect different productions between multiple arguments to the `\cite` command.

`\rev@citealpnum` provides textual citations where superscript citations are the default. These should be accessible via the `\citet` command.

Therefore we remember how to do a numerical citation even when the superscript citation has been selected.

```

1217 \expandafter\DeclareRobustCommand
1218 \expandafter\rev@citet
1219 \expandafter{%
1220   \expandafter\begingroup

```

```

1221  \expandafter\rtx@swap@citea
1222  \expandafter\g@bblefirsttoken
1223          \csname citet \endcsname
1224 }%
1225 \expandafter\DeclareRobustCommand
1226 \expandafter\rev@citealp
1227 \expandafter{%
1228  \expandafter\begingroup

```

`\rtx@citesuper` We prepare to redefine `natbib`'s procedure `\NAT@citesuper`, which is executed when setting a superscript citation. The `\hspace` is removed: in any case, it should really be `\hspace*`, to prevent an unwanted pagebreak.

```

1252 \newcommand\rtx@citesuper[3]{%
1253  \ifNAT@swa
1254  \leavevmode
1255  \unskip
1256 % \hspace{1\p@}%
1257  \textsuperscript{\normalfont#1}%
1258  \if*#3*\else\ (#3)\fi
1259  \else
1260  #1%
1261  \fi
1262  \endgroup
1263 }%

```

`\@makefnmark@cite` We define a procedure that will set a footnote mark the same way that a citation is set. If footnotes are put in the bibliography with `\footinbib@sw`, then the

corresponding mark should look the same as the result of a \cite. This is how we do it.

```
1264 \def\@makefnmark@cite{\begingroup\nAT@swatru\@cite{{\@thefnmark}}{}{}}%
```

\rtx@bibsection Prepare to override natbib's definition of \bibsection.

```
1265 \def\rtx@bibsection{%
1266   \@ifx@\empty\refname{%
1267     \par
1268   }{%
1269     \let\hangfroms@section\hang@froms
1270     \expandafter\section\expandafter*\expandafter{\refname}%
1271     \nobreaktrue
1272   }%
1273 }%
```

\rtx@swap@citea The procedures \rtx@def@citea, \rtx@def@citea@close, and \rtx@def@citea@box can take over the management of natbib's \citea macro to effect more sophisticated behavior of the punctuation between textual citations. The switch is performed by \rtx@swap@citea.

```
1274 \def\rtx@swap@citea{%
1275   \let\nAT@def@citea\rtx@def@citea
1276   \let\nAT@def@citea@close\rtx@def@citea@close

1304 \let\NAT@citesuper\rtx@citesuper
```

\NAT@bibsetnum We define the sectioning command to use when starting the bibliography and

\NAT@bibsetup gently coax `natbib` into using the formatting procedures that *we* want it to use.

\bibpreamble This way of setting up `thebibliography` automatically sets the label width
\newblock based on the largest number used within the bibliography. This scheme will not
\bibnumfmt work properly using the author/year style of bib entry, though.

\NAT@merge We define `\bibnumfmt` to be `\place@bibnumber`, which is a macro managed by
REVTEX. If the document defines `\bibnumfmt`, then that definition will be used
instead, which is what the `natbib` package gives as its programming interface.

We set `\NAT@merge` to `\tw@`, which turns on `natbib`'s `mcite` capabilities. This
is the default setting. If numerical citations are not to be used, then `\NAT@merge`
should be set to `\one` (syntax is still enabled, but semantics are turned off).

```
1305 \let\bibsection\rtx@bibsection  
1306 \let\NATx@bibsetnum\NAT@bibsetnum  
1307 \def\NAT@bibsetnum#1{

```

write@bibliographystyle We wish to delay committing the `\bibliographystyle` until as late as possible. The journal substyle will define a default bibliography style, and the document's explicit `\bibliographystyle` command, if any, will override that default.

The `\bibstyle` command is allowed appear quite late in the `.aux` file. We now delay the automatic writing of the `\bibstyle` command to the end of the job.

The procedure `\write@bibliographystyle` tests whether a `\bibliographystyle` command has already been given. If not, it effectively executes the needed `\bibliographystyle` command, then neutralizes itself (we only need to do this once per job).

```

1374 \def\write@bibliographystyle{%
1375 \@ifxundefined\@bibstyle{}{%
1376 \expandafter\bibliographystyle@latex\expandafter{\@bibstyle}}%
1377 }%
1378 \global\let\write@bibliographystyle\relax
1379 }%
1380 \AtEndDocument{\write@bibliographystyle}%

```

\rtx@@citetp We wish to extend `natbib` to move spaces and citations around a subscript style citation, imitating Donald Arseneau's `cite` package with the `super`.

\super@cite@let The `\rtx@@citetp` procedure is substituted for `\NAT@@citetp`; it then calls the `\rtx@citex` procedure and implements the features of the `citeautoscript` class option. In the end, `\@citex` is called with its customary parameters.

The document should be marked up as if citations were *not* superscripted, and then if you select a journal substyle that has superscripted citations, REV_EX will do its best to alter the formatting of the `\cites` to accomodate superscript style.

Only citations set as superscript are affected by this procedure, because we check `\@cite` against `\NAT@citesuper`.

Here's a subtle point: when is the argument of `\super@cite@swap` not the same as the token `\@let@token`? Answer: when the latter is `\@sptoken!` This

case has to be handled separately.

Note that whether a punctuation is movable is determined by the definition of a particular control sequence name. A society or journal can alter things: to remove a character from the set, do, say, `\expandafter\let\csnamertx@automove; \endcsname\relax`. To add a character to the set, do, say, `\expandafter\let\csnamertx@automove; \endcsname\@empty`.

Implementation note: due to a TEX peculiarity, we have to check for the case where `\@let@token` is a space token *before* we parse forward. At issue is the corner case where an end of file is at hand. If we were to let `\super@cite@swap` parse forward, we would encounter a TEX end-of-file error. Note that the test will be true in many distinct cases: the file ends, the next character is a line terminator, the next character is a space.

```

\endnote@ext The macro \endnote@ext is the file extension for the auxiliary file holding footnotes. The \bibdata@app and \bibdata@ext macros are used to form the name of a BibTeX database file holding footnotes.

```

1448 \def\endnote@ext{.end}%
1449 \def\bibdata@app{Notes}%
1450 \def\bibdata@ext{bib}%

```

\@endnotetext The procedure \@endnotetext writes a BibTeX .bib file for the purpose of inserting a footnote into the (numbered, unsorted) bibliography.

We need to define \pre@bibdata to be \jobname\endnote@ext, and we probably should define \endnote@ext to be something like “Notes.bib”.

In each case, the material to be written out requires robustification, provided by \endnote@relax. The commands \label, \index, and \glossary, which are robustified for \markright and \addcontentsline, are likewise robustified here.

Procedure \@endnotetext@note is the alias for \@endnotetext when the endnotes are to be processed separately from the bibliography (generally true when citations are not sorted).

```
%\long\def\unused@endnotetext@note#1{%
%  \@ifxundefined\@endnoteout{%

```
%\def\@doendnote#1#2{\bibitem{#1}{#2}}%
%
```

Procedure \@endnotetext is the operative procedure when the endnotes are to be collated in with the other references, typically true when numerical citations are being used. The technique involves writing a .bib file (\@bibdataout) with each endnote typed as a @MISC entry.

Timing note: doing \openout should be deferred until the beginning of the document, as is done here. This allows one to make a format (revtex4-1.dtx.fmt) file out of this class.

```
1451 \long\def\@endnotetext#1{%
1452   \begingroup

1507 }%
```

The switchover to setting footnotes in the bibliography changes the meaning
of `\footnote` and substitutes the synonym for `\@endnotesinbib`.

We arrange for the procedure `\make@footnote@endnote` to be executed at
`\class@documenthook` time (we mustn't do this earlier because the meaning of
`\@footnotemark` must not be changed before then, for the sake of `ltxutil.dtx`).

```
1508 \appdef\class@documenthook{%
1509   \make@footnote@endnote
1510 }%
```

`\auto@bib` Under some circumstances, we must typeset the bibliography automatically. If the
document requires footnotes to be set in the bibliography (effectively, class option
`footinbib`), or that frontmatter footnotes be set in the bibliography (effectively,
class option `bibnotes`), but contains no explicit `\bibliography` statement.

Note that this facility is not able to work more than once per document. If multiple bibliographies are required (e.g., per article), it will be the responsibility of the journal style to restore `\auto@bib` to its original meaning so it can be re-invoked.

In procedure `\auto@bib`, we first test for the presence of frontmatter footnotes deferred to the bibliography. If none, we further test for the presence of `\bibitem` commands in the job's revtex4-1.dtx.bbl file. If either condition is met, we ask for a bibliography. We know that the document itself lacks a `\bibliography` statement, so we know the argument of the `\bibliography` that we will issue.

```

1511 \def\auto@bib{%
1512   \@ifx@\empty\@FMN@list{%
1513     \footinbib@sw{%
1514       \@ifnum{\thefootnote}>\z@{%
1515         \true@sw

17 Initial setup

The standard LaTeX document classes execute certain commands that are best deferred until `\class@documenthook` time. Here, we effectively split `\pagenumbers` into two halves, with a default definition for `\thepage` and an initialization of `\c@page` at `\class@documenthook` time.

The meaning of `\thepage` can be overridden by society, journal, or anywhere within the document preamble, and the counter itself will be preset at the beginning of the document.

```
1570 \def\thepage{\arabic\c@page}%

```

Note that this code is executed at `\setup@hook` time to allow for the possibility of overrides by packages like `geometry`.

```

```

- \open@onecolumn When setting the column grid, we have to override the procedure for formatting lists. Because \twocolumngrid requires rebalancing columns at some points, typesetting must employ only the manipulation of \leftskip and \rightskip, and must avoid the use of \moveleft, \moveright, and \parshape.

It is one of the stranger features of TeX that these two separate mechanisms exist. The latter three have the effect of adding things to the Main Vertical List that cannot be removed and later added back with all their properties intact.

In detail, \moveleft, say, adds a box to the MVL with its reference point shifted horizontally by some amount relative to the reference point of the enclosing list. If that box is removed from the MVL (via a \lastbox operation in the output routine), and later thrown back to the MVL, the shift of the box will have been “forgotten” by TeX. This is a bug, but not one “acceptable to D. E. Knuth”, so it will never be fixed.

21 English-Language Texts

As this class is just for English language journals, we could hardwire these texts, but to make it easier to use this as a basis for the code for similar journal styles, separate out all the fixed text strings into babel-style macros of the form `\...name`

Note: for babel compatibility, use version 1999/05/05 v3.6x or later.

Some of these might need changing in the society-specific code.

`\today` Procedure `\today` is used in the article class, but not in this document class.

```

1720 \def\today{\ifcase\month\or
1721   January\or February\or March\or April\or May\or June\or

23 Patches for lineno.sty

The revtex4-1.dtxlineno.sty package detects the case where the package has been loaded and the document invokes `\linelabel`, but the `\linenumbers` command has not been issued: it treats this case as an error.

It is wrong for validity of document syntax to be dependent upon package semantics: we make the condition a warning rather than an error.

```

1843 \def\@LN@Lerror@org{%
1844   \PackageError{lineno}{%
1845     \string\linelabel\space without \string\linenumbers
1846   }{%
1847     Just see documentation. (New feature v4.11)%
1848   }%
1849   \@gobble
1850 }%
1851 \def\@LN@Lerror@ltx{%
1852   \PackageWarning{lineno}{%
1853     To make the \string\linelabel\space command work, you must issue the \string\linenumbers\ com
1854   }%
1855   \@gobble
1856 }%

```

If appropriate, enable line numbering within the abstract.

This mechanism applies generally: Create the box in a context in which the meaning of `\par` has been patched by revtex4-1.dtxlineno.sty, then `\unvbox` the box in a context where `\set@linepenalties` has been executed, and follow up with `\@linenumberpar`, which forces a visit to the output routine just there. Note that here, we have to de-fang `\@LN@parpgbrk`, which would otherwise causes the appearance of a box with depth -1000 points. Go figure.

```

1857 \appdef\class@documenthook{%
1858   \@ifx{\@LN@Lerror\@LN@Lerror@org}{%
1859     \class@info{Overriding \string\@LN@Lerror}%
1860     \let\@LN@Lerror\@LN@Lerror@ltx
1861   }{%
1862   \@ifpackageloaded{lineno}{%

```

```

1863  \@ifxundefined{\set@linepenalties}{\{}%
1864    \def\prep@absbox{\set@linepenalties}%
1865    \def\post@absbox{\let\@LN@parpgbrk\empty\@linenumberpar}%
1866  \}%
1867 \}{}%
1868 \}%

```

One may well ask: how to obtain line numbering within an alignment in a float? This objective, along with line numbering within footnotes, would require extraordinary measures. The float would have to be thrown onto the MVL in order to acquire its line numbers, but that fragment of MVL would then have to be protected from being shipped out. The question of how to coordinate those lines' numbers with those of lines in the MVL would also require dealing with.

24 Endgame for the Document Class

We provide for a “job macro package” that can override definitions and assignments made by the class or any other packages it loads.

24.1 Job Macro Package

You can create a “job macro package” for your document that will be read in automatically every time your document is processed. Thus, if your job is a file called `myarticle.tex`, then the file `myarticle.rty` will be read in just the same as if you had placed a `\usepackage{myarticle.rty}` statement immediately following your `\documentclass` statement.

Within your `.rty` file, you can define and use control sequence names that use the `@` character and you can override any of the definitions or assignments made by the REVTEX document class or the selected journal substyle. That is, you have the power to really mess things up badly.

If you choose to have a job macro package, you are well advised to read the L^AT_EX guide to document classes, `clsguide.tex` or read up on the subject in a book like the L^AT_EX Companion.

The file `template.rty` contains a template for creating your own job macro package.

```

1869 \appdef\rtx@require@packages{%
1870  \InputIfFileExists{\jobname.rty}{}{}%
1871 }%

```

24.2 Endgame Processing for the Document Class

The remaining steps in processing the document class involve determining the needed society, journal, and pointsize from the document's class options and inputting the needed files or executing the indicated procedures.

Note that the society file is expected to declare options that will allow us to determine the journal involved, and the society and journal themselves determine the which pointsize options are declared, along with their meanings.

Note also that required packages are read in only after the document options have been processed, because the latter can affect the former.

Finally, the setup code is executed: this is code that depends on the meanings of the switches we define and on the code within the packages we load.

Note that there are other hooks in use: `\document@inithook`, which is executed right at the beginning of the document, and `\class@documenthook`, which serves as a vehicle for any `\AtBeginDocument` code we might wish to execute.

FIXME: use `\class@documenthook` only for things that bear on the MVL; use `\document@inithook` for all patches to procedures defined within the preamble.

Remember that `natbib` changes its state at `\AtBeginDocument` time, so we have to install our own code at a later point in the processing.

We determine the proper `\@society` by examining the document's class options.

1872 `\@parse@class@options@society`

Then, we input the society's substyle (which may in turn lead to loading a journal substyle or a pointsize substyle). The substyle should not assume the value of any class option: instead, it should install code into `\setup@hook`.

1873 `\@process@society{aps}%`

Now that the society has defined the class options relating to journals, and has defined `\@journal@default`, we can process the journal substyle. We parse the options for one that sets `\@journal`.

1874 `\@parse@class@options@\@journal`

And we process the journal. Note that *it is an error* for a society file to fail to define `\@journal@default`.

1875 `\expandafter\@process@journal\expandafter{\@journal@default}%`

Now that the society and journal have finished defining any options relating to point size, we process the class options for any that set `\@pointsize`.

1876 `\@parse@class@options@\@pointsize`

And we process the pointsize. Note that it is an error for the society and journal to leave `\@pointsize@default` undefined at this point, however, the journal may have overridden the assignment of the society.

1877 `\expandafter\@process@pointsize\expandafter{\@pointsize@default}%`

Next, we process the class options for once and all. Doing so sets values for some of the Booleans that were introduced along with the `\DeclareOption` statements above.

CHANGE: We process the options in the order declared in the document; this gives the document greater control.

1878 `\@options`

Now that the class options have been processed, we can load all the packages that we know need loading.

1879 `\rtx@require@packages`

At this point, the society substyle, the journal substyle, and the pointsize have all been processed, along with the document class options. Some of these have left things for later; we do these now.

\setup@hook This portion of the code for this class file *must* appear at the very end: The procedure \setup@hook should be executed at the very end of the class file. Any code that relies on the value of any of the @sw switches or will patch the code of one of the required packages should be executed here.

1880 \setup@hook

Warn if past maturity date. This code to be enabled only in beta software.

30 The `aps` class extension: the `aps` module

The file `aps.rtx` is read in by the `revtex4` document class if `\@society` has the value `aps`.

Here, code specific to APS journals is separated out from the REVTEX document class. (Other societies can customize REVTEX by supplying their own `.rtx` file.)

This class extension file is a model for a class extension you might write yourself.

First, incorporate a `\ProvidesFile` command with an optional argument giving the version information, e.g.,

```
% \ProvidesFile{foo}[2001/09/11 v1.1 Docinfo]%
%
```

Within the society substyle, there are two things we must do as well: define the default journal,

```
% \def\@journal@default{pra}%
%
```

And do likewise for the point size:

```
% \def\@pointsize@default{10}%
%
```

We first define some text entities (amounting to journal abbreviations), then some APS-specific initialisations, then code for particular APS journals. In the latter case, the choice is keyed off the macro `\@journal`.

2393 %<*aps>

30.1 Defend Against Forseeable Errors

Protect this file from being read in by anything but REVTEX.

```
2394 \ifx\undefined\substyle@ext
2395   \def\@tempa{%
2396     \endinput
2397     \GenericWarning{I must be read in by REVTeX! (Bailing out)}%
2398   }%
2399   \expandafter\else
2400   \def\@tempa{}%
2401   \expandafter\fi\@tempa
2402 \class@info{RevTeX society APS selected}%

```

Here are the class options relating to the APS:

```
2403 \DeclareOption{pra}{\change@journal{pra}}%
2404 \DeclareOption{prb}{\change@journal{prb}}%
2405 \DeclareOption{prc}{\change@journal{prc}}%
2406 \DeclareOption{prd}{\change@journal{prd}}%
```

```

2407 \DeclareOption{pre}{\change@journal{pre}}%
2408 \DeclareOption{prl}{\change@journal{prl}}%
2409 \DeclareOption{prstab}{\change@journal{prstab}}%
2410 \DeclareOption{prstper}{\change@journal{prstper}}%
2411 \DeclareOption{rmp}{\change@journal{rmp}}%

```

30.2 Abbreviations

The following macros constitute typing shortcuts for certain journal names.

30.3 APS Setup

Here we define the default procedures for APS journals. Individual APS journals may override these definitions.

30.3.1 Title block

The specifics of the title block. Apply to all APS journals; individual journals may override these settings.

\@fnsymbol The L^AT_EX kernel definition of \fnsymbol is overridden. The definition in revtex4-1.dtxfixltx2e.sty serves as a guide to the new way to symbol, working in both text- and math modes.

revtex4-1.dtxfixltx2e.sty duplicates some features of revtex4-1.dtxltxgrid and revtex4-1.dtxltxutil, however, so it may be incompatible with REV^TE_X. In case it is not loaded, we must provide a meaning for \TextOrMath, which that package makes robust. I believe that it is \fnsymbol itself that ought to be robustified. e^TE_X further complicates matters; we do not especially accomodate it.

Not! \TextOrMath must be made robust in any case (Bug 530). I return things to follow core L^AT_EX 2_ε (revtex4-1.dtxlateX.ltx).

```

2442 \def\@fnsymbol#1{%

```

All APS journal preprints use separate titlepage and full-width abstract.

In effect, we establish a society default value for `\preprintsty@sw`, and for `\titlepage@sw`.

```

2508 \@booleanfalse\preprintsty@sw
2509 \@booleantrue\titlepage@sw

```

We choose the page style for all APS journals. The journal may override by inserting its own code in `\setup@hook`. Users wishing to customize their documents will be able to invoke a `\pagestyle` command anywhere in the preamble; it will override the assignments here.

Here is the big switch for APS preprints. Note that `\preprintsty@swis` also consulted in various procedures, but we assume its value does not change after `\setup@hook` time.

```

2510 \appdef\setup@hook{%
2511   \preprintsty@sw{%
2512     \ps@preprint

30.3.2 Stacked Heads

All APS journals put a period (.), followed by quad space, after the section number.
Also, no hanging section number.

```

2640 \def\@secntformat#1{\csname the#1\endcsname.\quad}%
2641 \def\@hangfrom#1#2#3{#1#2#3}%

```

Note that in the following, we wish to set the section head uppercase, so we use David Carlisle's `\MakeTextUppercase`. However, because this procedure effectively parses its argument (looking for things to *not* translate), it has to be invoked in such a way that the argument of the `\section` command is passed to it as its own argument.

To accomplish this, we use the `\@hangfrom@` hook, which was developed for this purpose.

30.3.9 Bibliography

Customize REV_EX for the journal substyle; this task requires three components: the BIB_EX `apsrev.bst` and `apsrmp.bst` style files, customizing code for `natbib`, and customizations of the `thebibliography` environment.

\@bibstyle Define the argument of the `\bibliographystyle` command (if the document does not do so). The user must have installed a `.bst` file of the corresponding name. This file will then be used by BIB_EX when compiling the document's `.bb1` file.

To generate `apsrev.bst`, use `custom-bib` version 4.21 or later. Run the `.bst` generator, `makebst.tex`, and accept all defaults, with the following exceptions:

1. LANGUAGE FIELD: `l: lang`—Use language field to switch hyphenation patterns for title
2. ANNOTATIONS: `a: annote`—Annotations in `annote` field or in `.tex` file of citekey name
3. PRESENTATIONS: `b: pres,pres-bf`—Presentation, speaker bold face
4. ORDERING OF REFERENCES: `c: seq-no`—Citation order (unsorted, like `unsrt bst`)

5. ORDER ON VON PART: **x**: `vonx`—Sort without von part (de la Maire after Mahone)
6. AUTHOR NAMES: **i**: `nm-init,ed-au`—Initials + surname (J. F. Smith)
7. POSITION OF JUNIOR: *****: `jnr1st`—Junior comes last as Smith, John, Jr.
8. TYPEFACE FOR AUTHORS IN LIST OF REFERENCES: **u**: `nmft,nmft-def`—User defined author font (`\bibnamefont`)
9. FONT FOR FIRST NAMES: **u**: `fnm-def`—First names in user defined font (`\bibfnamefont`)
10. EDITOR NAMES IN INCOLLECTION ETC: **a**: `nmfted`—Editors incollection like authors font
11. FONT FOR ‘AND’ IN LIST: **r**: `nmand-rm`—‘And’ in normal font (JONES and JAMES)
12. FONT OF CITATION LABELS IN TEXT: **u**: `lab,lab-def`—User defined citation font (`\citenamefont`)
13. FONT FOR ‘AND’ IN CITATIONS: **r**: `and-rm`—Cited ‘and’ in normal font
14. DATE FORMAT: *****: `yr-par`—Date in parentheses as (May 1993)
15. DATE EMPTY: **-**: `date-nil-x`—If date is empty, then do not produce the surrounding punctuation (parens, brackets, colon, comma)
16. TITLE OF ARTICLE: **d**: `tit-qq`—Title and punctuation in double quotes (“Title,” ..)
17. INPROCEEDINGS CHAPTER AND PAGES, LIKE INBOOK: **-**: `inproceedings-chapter`—produce pages after chapter, just as in InBook
18. TITLE PRESENT IN ARTICLE, INCOLLECTION, AND INPROCEEDINGS: **x**: `jtit-x`—Title is ignored
19. INPROCEEDINGS CHAPTER AND PAGES, LIKE INBOOK: **y**: `inproceedings-chapter`—produce pages after chapter, just as in InBook
20. ARTICLE BOOKTITLE PRESENT: : `article-booktitle`—format booktitle
21. ARTICLE SERIES PRESENT: : `article-series`—article can have series
22. JOURNAL NAME FONT: **r**: `jttl-rm`—Journal name normal font
23. JOURNAL NAME WITH ADDRESS: **y**: `journal-address`—Include address field (in parentheses) along with journal name
24. BOOK TITLE FIELDS: **y**: `book-bt`—Field ‘booktitle’, or if absent field ‘title’, is book title

25. THESIS TITLE OPTIONAL: : **thesis-title-o**—Title is optional: no warning issued if empty
26. TECHNICAL REPORT TITLE: **b: trtit-b**—Tech. report title like books
27. TECHNICAL REPORT INSTITUTION: : **techreport-institution-par**—format tech report institution like book publisher
28. JOURNAL VOLUME: **b: vol-bf**—Volume bold as **vol(num)**
29. JOURNAL VOL AND NUMBER: **x: vnum-x**—Journal vol, without number as 34
30. VOLUME PUNCTUATION: **c: volp-com**—Volume with comma as **vol(num)**, ppp
31. PAGE NUMBERS: **f: jpg-1**—Only start page number
32. BOOK EDITOR W/O AUTHOR: : **book-editor-booktitle**—Book permits empty author, produces title before editor in this case
33. INBOOK PERMITS TITLE, BOOKTITLE, AUTHOR, EDITOR: **a: inbook-editor-booktitle**—Allow using both title/booktitle, both author/editor
34. CONFERENCE ADDRESS FOR BOOK, INBOOK, INCOLLECTION, IN-PROCEEDINGS, PROCEEDINGS: **a: bookaddress**—Italic booktitle followed by bookaddress in roman
35. NUMBER AND SERIES FOR BOOK, INBOOK, INCOLLECTION, IN-PROCEEDINGS, PROCEEDINGS: *: **num-xser**—Allows number without series and suppresses word "number"
36. WORD NUMBER CAPITALIZED FOR NUMBER AND SERIES: **c: number-cap**—Capitalize word 'number' as: "Number 123"
37. WORD CHAPTER CAPITALIZED: **c: chapter-cap**—Capitalize word 'chapter' as: 'Chapter 42'
38. COMBINING NUMBER AND SERIES: **x: series-number**—Series number as: 'Springer Lecture Notes No. 125'
39. POSITION OF NUMBER AND SERIES: **b: numser-booktitle**—After book title and conference address, and before editors
40. VOLUME AND SERIES FOR BOOKS/COLLECTIONS: **s: ser-vol**—Series, vol. 23
41. VOLUME AND SERIES FORMATTING: **y: ser-rm**—format series roman , even when used with volume
42. WORD VOLUME CAPITALIZED FOR VOLUME AND SERIES: **y: volume-cap**—Capitalize word 'volume', as: 'Volume 7 in Lecture Series'

43. POSITION OF VOLUME AND SERIES FOR INCOLLECTION, INBOOK, AND INPROCEEDINGS: **e**: `ser-ed`—Series and volume after booktitle and before editors
44. JOURNAL NAME PUNCTUATION: **x**: `jnm-x`—Space after journal name
45. PAGES IN BOOK: *****: `pg-bk,book-chapter-pages`—As chapter and page: chapter 42, page 345
46. PUBLISHER IN PARENTHESES: **d**: `pub-date`—Publisher with address and date in parentheses (Oxford, 1994)
47. EMPTY PUBLISHER PARENTHESES: **y**: `ay-empty-pub-parens-x`—eliminate parentheses altogether if nothing inside
48. PUBLISHER POSITION: **:** `pre-pub`—Publisher before volume, chapter, pages
49. **:** `pre-edn`—Edition before publisher
50. **:** **p**: `pre-pub,pre-edn`—Edition, publisher, volume, chapter, pages
51. ISBN NUMBER: *****: `isbn`—Include ISBN for books, booklets, etc.
52. ISSN NUMBER: *****: `issn`—Include ISSN for periodicals
53. DOI NUMBER: **a**: `doi-link,doi`—Doi forms a link to the publication, anchored to the volume or title
54. EDITOR IN COLLECTIONS: **b**: `edby`—In booktitle, edited by .. (where .. is names)
55. PUNCTUATION BETWEEN SECTIONS (BLOCKS): **c**: `blk-com`—Comma between blocks
56. FINAL PUNCTUATION: **c**: `fin-endbibitem`—Command at end instead of period
57. ABBREVIATE WORD ‘PAGES’: **a**: `pp`—‘Page’ abbreviated as p. or pp.
58. ABBREVIATE WORD ‘EDITORS’: **a**: `ed`—‘Editor’ abbreviated as ed. or eds.
59. OTHER ABBREVIATIONS: **a**: `abr`—Abbreviations of such words
60. ABBREVIATION FOR ‘EDITION’: **a**: `ednx`—‘Edition’ abbreviated as ‘ed’
61. EDITION NUMBERS: **n**: `ord`—Numerical editions as 1st, 2nd, 3rd, etc
62. STORED JOURNAL NAMES: **a**: `jabr`—Abbreviated journal names
63. FONT OF ‘ET AL’: **i**: `etal-it`—Italic et al

64. ADDITIONAL REVTeX DATA FIELDS: **r**: `revdata,eprint,url,url-blk,translation`—Include REVTeX data fields collaboration, eid, eprint, archive, url, translation
65. SLACcitation FIELD: : `SLACcitation`—Produce SLACcitation field
66. NUMPAGES DATA FIELD: ***: numpages-x**—Do not include numpages field
67. URL ADDRESS: ***: url,url-prefix-x**—URL without prefix (default: ‘URL ’)
68. REFERENCE COMPONENT TAGS: **b: bibinfo**—Reference component tags like `\bibinfo` in the content of `\bibitem`
69. ELEMENT TAGS: **b: bibfield**—Element tags like `\bibfield` in the content of `\bibitem`
70. COMPATIBILITY WITH PLAIN TEX: ***: nfss**—Use LaTeX commands which may not work with Plain TeX

A file `apsrev.dbj` file equivalent to the following should result:

```

```

Note that `apsrevlong.dbj` is the same as `apsrev.dbj`, except:

- Remove `jtit-x`, `jpg-1`. This means article titles and full page range.
- Add `article-title-o`: article title is not required.
- Remove `nm-init`. This means full names.
- The file to be `\generated` is `revtex4-1.dtxapsrev4-1long bst` instead of `revtex4-1.dtxapsrev4-1 bst`.

30.3.10 Comparing `apsrev bst` and `apsrmp bst`

These two bibliographic styles differ as follows: `apsrev.dbj` has the following guard codes, which `apsrmp.dbj` does not:

- `seq-no`— Citation order (unsorted, like `unsrt bst`)
- `nm-init,ed-au`— Initials + surname (J. F. Smith)
- `yr-par`— Date in parentheses as (May 1993)
- `date-nil-x`— If date is empty, then do not produce the surrounding punctuation (parens, brackets, colon, comma)
- `inproceedings-chapter`— produce pages after chapter, just as in InBook
- `techreport-institution-par`— format tech report institution like book publisher
- `vnum-x`— Journal vol, without number as 34
- `pub-date`— Publisher with address and date in parentheses (Oxford, 1994)
- `pre-pub`— Publisher before volume, chapter, pages
- `pre-pub,pre-edn`— Edition, publisher, volume, chapter, pages
- `url,url-prefix-x`— URL without prefix (default: 'URL ')

To get a banner in the `.blg` file, patch by hand into `apsrev bst`:

```
% FUNCTION {banner.log} {"REVTeX-compatible apsrev.bst 9812" warning$}
%
```

and invoke `banner.log` from within `begin.bib`

We ensure that the journal substyle has the first word in the matter by installing the (default) APS code later on (see Section 30.6).

`\authoryear@sw` Numerical citations: default value of `\authoryear@sw` is false.

```
2824 \@booleanfalse\authoryear@sw
```

`\bibpunct` The following commands effectively establish the style in which `\cite` commands are formatted. You can think of them as the second needed component for the bibliography.

Set up for APS numerical citations (once the packages are loaded). The journal substyle can override these choices.

Note that, prior to `natbib` version 8.21, changing `\NAT@sort` at this late hour would not be totally effective; you would have to give `natbib` the relevant options at load time. From version 8.21 on, `\NAT@sort` and `\NAT@cmprs` are not bound at all.

```
2825 \appdef\setup@hook{%
2826   \bibpunct{}{}{}{,}{n}{,}%
2827 }%
```

`\pre@bibdata` Set up to write endnotes to a .bib file; its data will be incorporated into the bibliography.

```
2828 \def\pre@bibdata{\jobname\bibdata@app}%
```

`\bibsection` We define the sectioning command to use when starting the bibliography.

```
2829 \appdef\setup@hook{%
2830   \def\bibsection{%

30.4 Journal- and Pointspecific Code

After this substyle is read in, we will execute the code specific to the selected journal: execute the society/journal .rtx file if it exists, or execute the society/journal macro (if the latter is not defined, it will \relax out). Here we define the default journal.

```
2901 \def\@journal@default{pra}%
```

30.5 Typespecific Code

After this society file is read in, we will process the \@pointspecific-specific code. Here we define the default.

```
2902 \def\@pointspecific@default{10}%
```

Note: the convention in REVTEX and its substyles is that the substyle must not override any explicit class options declared by the document. This means that the various Booleans of Section 9 may be assigned here only if they are still undefined at this point.

For the APS, we supply code specific to journals PRA, PRB, PRC, PRD, PRE, PRL, and RMP. At present, they are identical, with the exception of PRB and RMP.

For most all of the APS journals, the journal-dependent code is relatively meager and is therefore embedded in this file. However, the RMP code is sufficiently extensive that splitting it out into a separate file is more convenient.

30.5.1 pra

There is no code specific to pra.

```

2903 \def\rtx@apspra{%
2904 \class@info{APS journal PRA selected}%
2905 }%
```

30.5.2 prb

We define a \citealp-like procedure that uses a numerical citation; it is for use in the PRB journal.

```
2906 \def\rtx@apsprb{%
2907 \class@info{APS journal PRB selected}%

```

PRB requires superscript citations. We use Patrick Daly's `natbib` package, and `hyperref` and other packages are already set up to cope with this.

`\bibpunct` By default, PRB selects the `bibnotes` option. We also set up for numerical citations.

```
2908 \let\frontmatter@footnote@produce\frontmatter@footnote@produce@endnote
2909 \appdef\setup@hook{%
2910 \bibpunct{}{}{,}{,}{,}{\textsuperscript{,}}%
2911 \let\onlinecite\rev@citealpnum
2912 }%
```

`\pre@bibdata` Set up to write endnotes to a .bib file; its data will be incorporated into the `@endnotetext` bibliography.

```
2913 \def\pre@bibdata{\jobname\bibdata@app}%

```

Invoke `superbib` option. If the document makes a selection of its own, it will override this assignment.

```
2914 \let\place@bibnumber\place@bibnumber@sup
      End of prb code.
2915 }%
```

30.5.3 prc

2998   }{}%
2999 }%
```

30.7 APS Sanity Checking

Rule: if `\place@bibnumber` is `\place@bibnumber@sup` (citations are numbered and set superscript), then it makes no sense for `\footinbib@sw` to be `\false@sw` (footnotes set in the bibliography, as endnotes). If both conditions prevailed, then the document would have footnotes and citations both as superscript arabic numbers, but independently numbered, which would be confusing.

Any society that provides for both superscript numbered citations as well as for numbered footnotes should check for this same condition, and deal with it.

Note: an alternative would be for footnotes to use the same sequence of footnote devices that are used by the frontmatter footnotes (`\frontmatter@thefootnote` instead of arabic numbers).

In this case, we would want to refrain from resetting `\c@footnote` at the end of the title page formatting. We would also want to treat body footnotes identically to frontmatter footnotes: the assignments in `\titleblock@produce` would persist throughout the document.

But APS do not choose to go that route.

```

32.4 Citations and Bibliography

Customize REV_TE_X for the journal substyle; this task requires three components: a BIBT_EX .bst style file, customizing code for natbib, and customizations of the thebibliography environment.

\@bibstyle Define the argument of the `\bibliographystyle` command (if the document does not do so).

The user must have installed a `.bst` file of the corresponding name. This file will then be used by BIBTEX when compiling the document's `.bb1` file.

To generate `apsrmp.bst`, use `custom-bib` version 3.89d1 or later. Run the `.bst` generator, `makebst.tex`, with the following options:

1. STYLE OF CITATIONS: **a:** `ay`—Author-year with some non-standard interface
2. AUTHOR: *****: `nat`—Natbib for use with natbib v5.3 or later
3. LANGUAGE FIELD: **l:** `lang`—Use language field to switch hyphenation patterns for title
4. ANNOTATIONS: **a:** `annote`—Annotations in `annote` field or in `.tex` file of citekey name
5. PRESENTATIONS: **b:** `pres,pres-bf`—Presentation, speaker bold face
6. ORDER ON VON PART : **x:** `vonx`—Sort without von part (de la Maire after Mahone)
7. AUTHOR NAMES: **a:** `nm-rev1`—Only first name reversed, initials (AGU style: Smith, J. F., H. K. Jones)
8. POSITION OF JUNIOR : *****: `jnr1st`—Junior comes last as Smith, John, Jr.
9. TYPEFACE FOR AUTHORS IN LIST OF REFERENCES: **u:** `nmft,nmft-def`—User defined author font (`\bibnamefont`)
10. FONT FOR FIRST NAMES : **u:** `fnm-def`—First names in user defined font (`\bibfnamefont`)
11. EDITOR NAMES IN INCOLLECTION ETC: **a:** `nmfted`—Editors incollection like authors font
12. FONT FOR ‘AND’ IN LIST: **r:** `nmand-rm`—‘And’ in normal font (JONES and JAMES)
13. FONT OF CITATION LABELS IN TEXT : **u:** `lab,lab-def`—User defined citation font (`\citenamefont`)
14. FONT FOR ‘AND’ IN CITATIONS : **r:** `and-rm`—Cited ‘and’ in normal font
15. LABEL WHEN AUTHORS MISSING : *****: `keyxyr`—Year blank when KEY replaces missing author (for natbib 7.0)
16. DATE POSITION: **b:** `dt-beg`—Date after authors
17. DATE FORMAT : **m:** `yr-com`—Date preceded by comma as ‘, 1993’

18. INCLUDE MONTHS: **m**: `aymth`—Include month in date
19. REVERSED DATE : **r**: `dtrev`—Date as year month
20. TRUNCATE YEAR : *****: `note-yr`—Year text full as 1990–1993 or ‘in press’
21. TITLE OF ARTICLE: **d**: `tit-qq`—Title and punctuation in double quotes (“Title,” ..)
22. TITLE PRESENT IN ARTICLE, INCOLLECTION, AND INPROCEEDINGS: **x**: `jtit-x`—Title is ignored
23. INPROCEEDINGS CHAPTER AND PAGES, LIKE INBOOK: **y**: `inproceedings-chapter`—produce pages after chapter just as in InBook
24. ARTICLE BOOKTITLE PRESENT: **?**: `article-booktitle`—format booktitle
25. ARTICLE SERIES PRESENT: **?**: `article-series`—article can has series
26. JOURNAL NAME FONT: **r**: `jttl-rm`—Journal name normal font
27. JOURNAL NAME WITH ADDRESS: **y**: `journal-address`—Include address field (in parentheses) along with journal name
28. BOOK TITLE FIELDS: **y**: `book-bt`—Field ‘booktitle’, or if absent field ‘title’, is book title
29. THESIS TITLE OPTIONAL: **?**: `thesis-title-o`—Title is optional: no warning issued if empty
30. TECHNICAL REPORT TITLE: **b**: `trtit-b`—Tech. report title like books
31. JOURNAL VOLUME: **b**: `vol-bf`—Volume bold as **vol**(num)
32. JOURNAL VOL AND NUMBER: **s**: `vnum-sp`—Journal vol (num) as 34 (2)
33. VOLUME PUNCTUATION: **c**: `volp-com`—Volume with comma as vol(num), ppp
34. PAGE NUMBERS: **f**: `jpg-1`—Only start page number
35. POSITION OF PAGES: **e**: `pp-last`—Pages at end but before any notes
36. BOOK EDITOR W/O AUTHOR: **:** `book-editor-booktitle`—Book permits empty author, produces title before editor in this case
37. INBOOK PERMITS TITLE, BOOKTITLE, AUTHOR, EDITOR: **a**: `inbook-editor-booktitle`—Allow using both title/booktitle, both author/editor
38. CONFERENCE ADDRESS FOR BOOK, INBOOK, INCOLLECTION, INPROCEEDINGS, PROCEEDINGS: **a**: `bookaddress`—Italic booktitle followed by bookaddress in roman

39. NUMBER AND SERIES FOR BOOK, INBOOK, INCOLLECTION, INPROCEEDINGS, PROCEEDINGS: *: `num-xser`—Allows number without series and suppresses word "number"
40. WORD NUMBER CAPITALIZED FOR NUMBER AND SERIES: `c: number-cap`—Capitalize word 'number' as: "Number 123"
41. WORD CHAPTER CAPITALIZED: `c: chapter-cap`—Capitalize word 'chapter' as: 'Chapter 42'
42. COMBINING NUMBER AND SERIES: `x: series-number`—Series number as: 'Springer Lecture Notes No. 125'
43. POSITION OF NUMBER AND SERIES: `b: numser-booktitle`—After book title and conference address, and before editors
44. VOLUME AND SERIES FOR BOOKS: `s: ser-vol`—Series, vol. 23
45. VOLUME AND SERIES FORMATTING: `y: ser-rm`—format series roman , even when used with volume
46. WORD VOLUME CAPITALIZED FOR VOLUME AND SERIES: `y: volume-cap`—Capitalize word 'volume', as: 'Volume 7 in Lecture Series'
47. POSITION OF VOLUME AND SERIES FOR INCOLLECTION, INBOOK, AND INPROCEEDINGS: `e: ser-ed`—Series and volume after booktitle and before editors
48. JOURNAL NAME PUNCTUATION: `x: jnm-x`—Space after journal name
49. PAGES IN BOOK: *: `pg-bk,book-chapter-pages`—As chapter and page: chapter 42, page 345
50. PUBLISHER IN PARENTHESES: `p: pub-par`—Publisher in parentheses
51. EMPTY PUBLISHER PARENTHESES: `y: ay-empty-pub-parens-x`—eliminate parentheses altogether if nothing inside
52. PUBLISHER POSITION: `e: pre-edn`—Edition before publisher
53. SCHOOL: `p: school-par`—school/address in parens: '(school, address)'
54. ISBN NUMBER: *: `isbn`—Include ISBN for books, booklets, etc.
55. ISSN NUMBER: *: `issn`—Include ISSN for periodicals
56. DOI NUMBER: `a: doi-link,doi`—Doi forms a link to the publication, anchored to the volume or title
57. 'EDITOR' AFTER NAMES: `a: bkedcap`—'Name Editor,' as above, editor upper case

58. EDITOR IN COLLECTIONS: **b**: `edb`y—In booktitle, edited by .. (where .. is names)
59. PUNCTUATION BETWEEN SECTIONS : **c**: `blk-com`—Comma between blocks
60. FINAL PUNCTUATION: **c**: `fin-endbibitem`—Command at end instead of period
61. ABBREVIATE WORD ‘PAGES’ : **a**: `pp`—‘Page’ abbreviated as p. or pp.
62. ABBREVIATE WORD ‘EDITORS’: **a**: `ed`—‘Editor’ abbreviated as ed. or eds.
63. OTHER ABBREVIATIONS: **a**: `abr`—Abbreviations of such words
64. ABBREVIATION FOR ‘EDITION’ : **a**: `ednx`—‘Edition’ abbreviated as ‘ed’
65. EDITION NUMBERS: **n**: `ord`—Numerical editions as 1st, 2nd, 3rd, etc
66. STORED JOURNAL NAMES: **a**: `jabr`—Abbreviated journal names
67. COMMA BEFORE ‘AND’: **c**: `and-com`—Comma even with 2 authors as ‘Tom, and Harry’
68. FONT OF ‘ET AL’: **i**: `etal-it`—Italic et al
69. ADDITIONAL REVTeX DATA FIELDS: **r**: `revdata, eprint, url, url-blk, translation`—Include REVTeX data fields collaboration, eid, eprint, archive, url, translation
70. SLACCitation FIELD: ?: `SLACCitation`—Produce SLACCitation field
71. NUMPAGES DATA FIELD: *: `numpages-x`—Do not include numpages field
72. REFERENCE COMPONENT TAGS: **b**: `bibinfo`—Reference component tags like `\bibinfo` in the content of `\bibitem`
73. ELEMENT TAGS: **b**: `bibfield`—Element tags like `\bibfield` in the content of `\bibitem`
74. COMPATIBILITY WITH PLAIN TEX: *: `nfss`—Use LaTeX commands which may not work with Plain TeX

A file `apsrmp.dbj` file equivalent to the following should result:

```
%\input docstrip
%\preamble
%-----
%*** REVTeX-compatible RMP 2009-10-08 ***
%\endpreamble
%\postamble
```

```

%End of customized bst file

```

Note that `apsrmplong.dbj` is the same as `apsrmp.dbj`, except:

- Remove `jtit-x`, `jpg-1`. This means article titles and full page range.
- Add `article-title-o`: article title is optional.

- Remove `nm-rev1`, remove `nm-revv1`. This means full author names.

32.4.1 Comparing `apsrev bst` and `apsrmp bst`

These two bibliographic styles differ as follows: `apsrmp.dbj` has the following guard codes, which `apsrev.dbj` does not:

- `ay`— Author-year with some non-standard interface
- `nat`— Natbib for use with natbib v5.3 or later
- `nm-rev1`— Only first name reversed, initials (AGU style: Smith, J. F., H. K. Jones)
- `keyxyr`— Year blank when KEY replaces missing author (for natbib 7.0)
- `dt-beg`— Date after authors
- `yr-com`— Date preceded by comma as ‘, 1993’
- `aymth`— Include month in date
- `dtrev`— Date as year month
- `note-yr`— Year text full as 1990–1993 or ‘in press’
- `vnum-sp`— Journal vol (num) as 34 (2)
- `pp-last`— Pages at end but before any notes
- `pub-par`— Publisher in parentheses
- `school-par`— school/address in parens: ‘(school, address)’
- `bkedcap`— ‘Name Editor,’ as above, editor upper case
- `and-com`— Comma even with 2 authors as ‘Tom, and Harry’

```
3193 \def\@bibstyle{apsrmp\substyle@post}%

```

`\authoryear@sw` Author-year citations: default value of `\authoryear@sw` is true.

```
3194 \booleantrue\authoryear@sw

```

`\cite` Per Mark Doyle, `\cite` is mapped to `\citet` in RMP.

```
3195 \let\cite\citet

```

`\bibpunct` The following commands effectively establish the style in which `\cite` commands are formatted. You can think of them as the second needed component for the bibliography.

`\newblock` Set up for author-year citations: when `\NAT@set@cites` executes (at `\begin{document}` time), the `\@biblabel` will be set to `\NAT@biblabel`.

`\bibhang`

`\bibsep`

Per Karie Friedman (friedman@phys.washington.edu), multiple citations are separated by semicolons, e.g., (Jones, 1999; Abbott and Smith, 2000; Wortley, 2001a), and multiple citations by the same author by commas, e.g., Abela et al. (1995, 1997a, 1997b). The third argument of \bibpunct handles the former.

The fifth argument puts a comma after the author when the year is not in parens: (Lee et al., 1996).

Incidentally, this \bibpunct command specifies the **natbib** default values.

We define the sectioning command to use when starting the bibliography.

We change **natbib**'s \NAT@def@citea procedure to effect more elaborate punctuation for RMP: see item 473: \cite order punctuation: “If possible, \textciteshould put the word ‘and’ between two citations and before the last citation in a list of 3 or more.”

```
3196 \appdef\setup@hook{%
```

We define the punctuation to use in the \cite command's production.

```
3197 \bibpunct{}{}{}{;}{a}{,}{,}{}
```

We define the sectioning command to use when starting the bibliography.

```
3198 \def\bibsection{%
3199 \expandafter\section\expandafter*\expandafter{\refname}%
3200 \nobreaktrue
3201 }%
3202 \let\bibpreamble\empty
3203 \def\newblock{\ }%
3204 \bibhang10\p@
3205 \bibsep\z@
3206 }%
```

\footinbib@sw Footnotes in bibliography are consistent only with numbered citations, and are particularly nasty under **natbib**: the package will automatically change to numbered references if any \bibitem commands lack the optional argument. Therefore, we must uninvoke it now, even if invoked by the document. The same is quietly done with **natbib**'s **mcite** and **compress** options.

(AO 523) I changed the code that alters \NAT@merge so that it will not override when \NAT@merge has been set to \z@.

```
3207 \booleanfalse\footinbib@sw
3208 \appdef\setup@hook{%
3209 \footinbib@swf%
3210 \class@warn{%
3211 Footnotes in bibliography are incompatible with RMP.^~J%
3212 Undoing the footinbib option.
3213 }%
3214 \booleanfalse\footinbib@sw
3215 }{}%
3216 \ifnum{\NAT@merge>\@ne}{\let\NAT@merge\@ne}{}%
3217 \def\NAT@cmprs{\z@}%
3218 }%
```

\eprint RMP requires the \eprint field in the bib entry to be set off with the word “eprint”.

3219 \def\@eprint#1{\eprint #1}%

32.5 Table of Contents

We set up for auto-sizing of certain TOC elements.

To do this, we override the definitions for the default TOC font (\toc@@font), and define formatting for the needed elements (\l@...). Finally, we activate the autosizing by assigning \toc@pre and \toc@post.

\toc@@font Set the formatting characteristics of the auto-indenting part of the TOC.

3220 \def\@toc@@font{
3221 \footnotesize\rmfamily
3222 \def\\{\space\ignorespaces}
3223 }%
3224 \def\@txu@dotsep{5.5pt}%

\l@section Determine which TOC elements are automatically indented.

3236 \% \def\l@subsubsubsection#1#2{}%
3237 \def\l@paragraph#1#2{}%
3238 \def\l@subparagraph#1#2{}%

Activate the TOC processing.

3239 \let\@toc@pre\@toc@pre@auto
3240 \let\@toc@post\@toc@post@auto
3241 %</rmp>

Here ends the programmer’s documentation.

Change History

4.0a	comma not space between email and homepage	5	
General: 4.0d had twoside option setting twoside switch to false .	5	Initial version	5

Move after process options, so <code>\clearpage</code> not in scope of <code>twocolumn</code>	5
Move after process options, so the following test works	5
multiple preprint commands	5
print homepage	5, 17
protect against hyperref revtex kludges which are not needed now	5, 17
Rearrange the ordering so nu- merical ones come first. AO: David, what does this mean? . . .	5
single space footnotes	5, 49
use font-dependent spacing	5
<code>\lastpage@putlabel</code> : Move after process options, so <code>\clearpage</code> not in scope of <code>twocolumn</code> . . .	34
<code>\openone</code> : use font-dependent spac- ing	77
<code>\preprintsty@sw</code> : comma not space between email and home- page	16
Rearrange the ordering so nu- merical ones come first. AO: David, what does this mean? . . .	16
<code>\ps@preprint</code> : Move after process options, so the following test works	33
<code>\ps@titlepage</code> : multiple preprint commands	95
<code>\twoside@sw</code> : 4.d had <code>twoside</code> op- tion setting <code>twoside</code> switch to false	20
4.0b	
<code>\@makecaption</code> : One-line caption sets flush left.	43
General: Added localization of <code>\figuresname</code>	5
Added localization of <code>\tablename</code>	5
AO: all code for 10pt is in this module.	5, 80
AO: all code for 11pt is in this module.	5, 84
AO: all code for 12pt is in this module.	5, 85
AO: made <code>aps.rtx</code> part of <code>rev-</code> <code>tex4.dtx</code>	5, 89
AO: remove duplicates	5
call <code>\print@floats</code>	5
Defer assignment until <code>\AtBeginDocument</code> time.	5, 64
Defer decision until <code>\AtBeginDocument</code> time	5
Define three separate environ- ments, defer assignment to <code>\AtBeginDocument</code> time.	5, 66
First modifications by Arthur Ogawa (mailto:arthur.ogawa@sbcl.org)	5
Frank Mittelbach, has stated in <code>multicol</code> : “The kernel com- mand <code>\@footnotetext</code> should not be modified.” Thus, I have removed David Carlisle’s redefinition of that command. Note, however, that later ver- sions of <code>multicol</code> do not require this workaround. Belt and sus- penders.	5, 49
Move this “complex” option to the front, where it can be over- ridden by “simple” options.	5, 17
New option	5
One-line caption sets flush left.	5
only execute if appropriate	5
Processing delayed to <code>\AtBeginDocument</code> time	5, 42, 45
Removed invocation of nonexistent class option <code>groupauthors</code> and all other class options that should only be invoked by the document. (Otherwise prece- dence of class options does not work.)	5, 32
Restore all media size class op- tion of <code>_classes.dtx</code>	5
Stack <code>\preprint</code> args flush right at right margin.	5
<code>\figurename</code> : Added localization of <code>\figuresname</code>	70
<code>\paperwidth</code> : Restore all media size class option of <code>_classes.dtx</code> . . .	18
<code>\preprintsty@sw</code> : Move this “com- plex” option to the front, where it can be overridden by “simple” options.	16
<code>\printfigures</code> : call <code>\print@floats</code>	44

\printtables: only execute if appropriate	46
\ps@preprint: Defer decision until \AtBeginDocument time	33
\ps@titlepage: Stack \preprint args flush right at right margin.	95
\roarrow: AO: remove duplicates	78
\showKEYS@sw: New option	16
\tablename: Added localization of \tablename	70
4.0c	
\@appendixcntformat: (AO, 129) section* within appendix was producing appendixname	101
\@makecaption: Prevent an inner footnote from performing twice	43
General: (AO, 115) If three or more preprints specified, set on single line, with commas.	5
(AO, 129) section* within appendix was producing appendixname	5
*-form mandates pagebreak	5
also spelled “acknowledgements”.	5, 39
Do not put by REVTeX in every page foot	5
grid changes via ltxgrid procedures	5
grid changes with ltxgrid	5, 67, 109
Insert procedure \checkindate .	5
Lose compatibility mode.	5, 13
New ltxgrid-based code, other bug fixes	5
New option “checkin”	5, 15
Prevent an inner footnote from performing twice	5
\close@column@grid: grid changes with ltxgrid	67
\frontmatter@abstractfont:	
(AO, 123) add parskip to the abstract.	92
\widetext@grid: grid changes via ltxgrid procedures	67
\open@column@two: Grid changes with ltxgrid	65
\printfigures: *-form mandates pagebreak	44
\printtables: *-form mandates pagebreak	46
\produce@preprints: (AO, 115) If three or more preprints specified, set on single line, with commas.	96
\ps@preprint: Do not put by REVTeX in every page foot	34
Insert procedure \checkindate	33, 34
\ps@titlepage: Insert procedure \checkindate	95
4.0d	
General: Also alter how lists get indented.	5
But alternative spelling is deprecated.	5, 39
eprint takes an optional argument, syntactical only in this case.	5
make longtable trigger the head, too	5
More features and bug fixes: compatibility with longtable and array packages. Now certainly incompatible with multicol.	5
New option	5
\open@column@two: Also alter how lists get indented.	65
\preprint@sw: New option	17
\printtables: make longtable trigger the head, too	46
\url: eprint takes an optional argument, syntactical only in this case.	72
4.0e	
General: adornments above and below.	5
Bug fixes and minor new features: title block affiliations can have ancillary data, just like authors; clearpage processing revamped, with floats staying in order; widetext ornaments.	5
New option showkeys	5
\widetext@grid: adornments above and below.	67
\showKEYS@sw: New option showkeys	16

4.0f	
General: Last bug fixes before release. 5
4.0rc1	
General: grid changes with push and pop 5, 109
Running headers always as if two-sided 5
\textbf{bibsection}: grid changes with push and pop 108
\textbf{ps@preprint}: Running headers always as if two-sided 33
4.0rc4	
General: hyperref is no longer loaded via class option: use a usepackage statement instead 5, 17
4.1a	
\textbf{@endnotesinbibliography}: (AO, 457) Endnotes to be sorted in with numerical citations. 61
\textbf{@endnotetext}: (AO, 457) Endnotes to be sorted in with numerical citations. 59, 111
\textbf{@makecaption}: (AO, 460) "Proper style is "FIG. 1. ..." (no colon)"	43
\textbf{@xendnote}: (AO, 457) Endnotes to be sorted in with numerical citations. 58
General: (AO, 451) "Cannot have more than 256 cites in a document" 5
(AO, 457) Endnotes to be sorted in with numerical citations. 5
(AO, 460) "Proper style is "FIG. 1. ..." (no colon)" 5
(AO, 461) Change the csname revtex uses from @dotsep to ltxu@dotsep. The former is understood in mu. (What we wanted was a dimension.) 5, 99
(AO, 478) \textbf{ds@letterpaper}, so that "letterpaper really is the default" 5
(AO, 488) Change processing of options to allow an unused option to specify society and journal 5, 30
For natbib versions before 8.21, \textbf{NAT@sort} was consulted only	
	as natbib was being read in.
	Now it is fully dynamic. 5
\textbf{authoryear@sw}: (AO, 457) Endnotes to be sorted in with numerical citations. .. 21, 108, 127	
\textbf{bibliography}: (AO, 457) Endnotes to be sorted in with numerical citations. 54	
\textbf{bibpunct}: For natbib versions before 8.21, \textbf{NAT@sort} was consulted only as natbib was being read in. Now it is fully dynamic. 108	
\textbf{paperwidth}: (AO, 478) \textbf{ds@letterpaper}, so that "letterpaper really is the default" 18	
\textbf{set@firstnote}: (AO, 451) "Cannot have more than 256 cites in a document" 61	
\textbf{toc@@font}: (AO, 461) Change the csname revtex uses from @dotsep to ltxu@dotsep. The former is understood in mu. (What we wanted was a dimension.) .. 129	
4.1b	
\textbf{@appendixcntformat}: Add \textbf{changefroms@section} 120	
\textbf{@makecaption}: Break out \textbf{@caption@fignum@sep} 120	
\textbf{@parse@class@options@}: Procedures \textbf{@parse@class@options@society} and \textbf{@parse@class@options@journal} and friends 30	
General: (AO) Implement bibnotes through \textbf{frontmatter@footnote@produce} instead of \textbf{bibnotes@sw} 5	
(AO) No longer need to test \textbf{chapter} as of natbib version 8.2	5
(AO) No longer use \textbf{secnumarabic@sw}, instead use \textbf{setup@secnms} 5, 23	
(AO) Provide more diagnostics when \textbf{@society} is assigned. .. 5	
(AO) Structure the Abstract using the \textbf{bibliography} environment	5, 38
(AO) coordinate \textbf{if@twoside} with \textbf{twoside@sw}	5

(AO) make settings at class time instead of deferring them to later.	5, 17, 116, 118
(AO) provide option longbibliography	5, 20
(AO, 455) Be nice to a list within the abstract (assign <code>\@totallleftmargin</code>).	5
Add <code>\changefroms@section</code>	5, 119
Add option reprint, opposite of preprint, and preferred alternative to twocolumn	5
As with author formatting, rag the right more, and assign <code>\@totallleftmargin</code> . Also neutralize <code>\def@after@address</code>	5
Break out <code>\caption@fignum@sep</code>	5
Class option galley sets <code>\preprintsty@sw</code> to false	5
Code relating to new syntax for frontmatter has been placed in <code>\ltxfront.dtx</code>	5, 28
Package textcase is now simply a required package	5
Procedures <code>\@parse@class@options@society</code> and <code>\@parse@class@options@journal</code> and friends	5
Rag the right even more: <code>.8\hsize</code> . Also, assign <code>\@totallleftmargin</code>	5
Read in all required packages together	5
Remove options newabstract and oldabstract	5, 29
Section numbering via procedures <code>\secnums@rtx</code> and <code>\secnums@arabic</code>	5, 118
The rmp journal substyle selects <code>groupedaddress</code> by default.	5, 116
The csname substyle@ext is now defined without a dot (.), to be compatible with L ^A T _E X usage (see @clsextension and @pkgesxtension).	5, 31
Use <code>\setup@hook</code> to initialize all.	5, 118
<code>\altaffilletter@sw</code> : (AO) make settings at class time instead of deferring them to later.	19
<code>\balancelastpage@sw</code> : (AO) make settings at class time instead of deferring them to later.	16
<code>\byrevtex@sw</code> : (AO) make settings at class time instead of deferring them to later.	28
<code>\change@journal</code> : (AO) Provide more diagnostics when <code>\@society</code> is assigned.	25
<code>\draft@sw</code> : (AO) make settings at class time instead of deferring them to later.	23
<code>\floatp@sw</code> : (AO) make settings at class time instead of deferring them to later.	24
<code>\footinbib@sw</code> : (AO) make settings at class time instead of deferring them to later.	19
<code>\force@deferlist@sw</code> : (AO) make settings at class time instead of deferring them to later.	28
<code>\frontmatter@abstractfont</code> : (AO, 455) Be nice to a list within the abstract (assign <code>\@totallleftmargin</code>).	117
<code>\frontmatter@affiliationfont</code> : (AO, 455) Be nice to a list within the abstract (assign <code>\@totallleftmargin</code>).	116
As with author formatting, rag the right more, and assign <code>\@totallleftmargin</code> . Also neutralize <code>\def@after@address</code>	116
<code>\frontmatter@authorformat</code> : (AO, 455) Be nice to a list within the abstract (assign <code>\@totallleftmargin</code>).	116
Rag the right even more: <code>.8\hsize</code> . Also, assign <code>\@totallleftmargin</code>	116
<code>\frontmatter@footnote@produce</code> : (AO) Implement bibnotes through <code>\frontmatter@footnote@produce</code> instead of <code>\bibnotes@sw</code>	18
<code>\frontmatter@RRAP@format</code> : (AO, 455) Be nice to a list within the abstract (assign <code>\@totallleftmargin</code>).	117
<code>\frontmatterverbose@sw</code> : Code relating to new syntax for front-	

matter has been placed in <code>\ltxfront.dtx</code>	29	<code>\twoside@sw</code>	20
<code>\galley@sw</code> : Class option galley sets <code>\preprintsty@sw</code> to false	22	<code>\@bibstyle</code> : Document class option longbibliography via <code>\substyle@post</code>	127
<code>\lengthcheck@sw</code> : (AO) make settings at class time instead of deferring them to later.	22	General: Document class option longbibliography via <code>\substyle@post</code>	5
<code>\MakeLowercase</code> : Package textcase is now simply a required package	26	<code>\@fnsymbol</code> : Definition of <code>\@fnsymbol</code> follows fixltx2e.sty	91
Read in all required packages together	26	General: Definition of <code>\@fnsymbol</code> follows fixltx2e.sty	5
<code>\amsfonts</code> : Read in all required packages together	26	<code>\@fnsymbol</code>	
<code>\amsmath</code> : Read in all required packages together	26	General: (AO, 455) be nice to a list within the abstract	5
<code>\amssymb</code> : Read in all required packages together	26	<code>\frontmatter@abstractfont</code> : (AO, 455) be nice to a list within the abstract	92
<code>\place@bibnumber</code> : (AO) make settings at class time instead of deferring them to later.	19	<code>\@endnotesinbibliography</code> : (AO, 520) Automatically produce <code>\bibliography</code> command when needed	61, 62
<code>\preprint@sw</code> : (AO) make settings at class time instead of deferring them to later.	17	<code>\@fnsymbol</code> : (AO, 530) <code>\@fnsymbol</code> : Failed to import fixltx2e.sty technology. Return to LaTeX core.	91
<code>\preprintsty@sw</code> : Add option reprint, opposite of preprint, and preferred alternative to twocolumn	16	General: (AO, 513) Add class option linenumbers: number the lines a la revtex4-1.dtxlineno.sty	5
<code>\raggedcolumn@sw</code> : (AO) make settings at class time instead of deferring them to later.	22	(AO, 516) Merged references are separated with a semicolon	5, 54
<code>\revsym@inithook</code> : (AO) make settings at class time instead of deferring them to later.	80	(AO, 520) Automatically produce <code>\bibliography</code> command when needed	5
<code>\rtr@require@packages</code> : Read in all required packages together	25	(AO, 521) Lonely bibliography head	5
<code>\super@cite@let</code> : (AO) No longer need to test <code>\chapter</code> as of natbib version 8.2	57	(AO, 522) Warn if software is expired	5, 76
<code>\tightenlines@sw</code> : (AO) make settings at class time instead of deferring them to later.	22	(AO, 523) Add class option nomerge, to turn off new natbib 8.3 syntax	5
<code>\titlepage@sw</code> : (AO) make settings at class time instead of deferring them to later.	24	(AO, 524) Makes no sense if citations are superscript numbers and so are footnotes	5, 114
<code>\twocolumn@sw</code> : (AO) make settings at class time instead of deferring them to later.	21	(AO, 530) <code>\@fnsymbol</code> : Failed to import fixltx2e.sty technology. Return to LaTeX core.	5
<code>\twoside@sw</code> : (AO) coordinate <code>\if@twoside</code> with			

\auto@bib:	(AO, 520) Automatically produce \bibliography command when needed	62	needed	60
